FUND SUMMARY: LEADERSHARES® ACTIVIST LEADERS® ETF

Investment Objective: The LeaderShares® Activist Leaders® ETF (the “Activist Leaders ETF” or the “Fund”) seeks to generate long-term capital growth.

Fees and Expenses of the Fund: This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund. You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fee ⁽¹⁾	0.75%
Distribution (12b-1) and Service Fees	0.00%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.75%

- (1) The Fund’s adviser provides investment advisory service, and pays most of the Fund’s operating expenses (except all brokerage fees and commissions, taxes, borrowing costs (such as dividend expense on securities sold short and interest), fees and expenses of other investment companies in which the Fund may invest, or extraordinary expenses such as litigation) in return for a “unitary fee.”

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based upon these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$77	\$240	\$417	\$930

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund’s performance. For the fiscal period ended October 31, 2020, the Fund’s Portfolio Turnover rate was 3% of the average value of its portfolio.

Principal Investment Strategies: The Fund is an actively managed exchange-traded fund (“ETF”) that employs an investment approach that focuses on equity securities that are the target of shareholder activism. These equity securities are identified using a proprietary quantitative methodology built on the foundation of tracking legally mandated filings known as “13D” filings that are submitted with the Securities and Exchange Commission (“SEC”). Rules adopted under the Securities Exchange Act of 1934 require a shareholder that acquires, with an activist intent, more than 5% of a company’s shares to file a form with the SEC known as a Schedule 13D that discloses the investor’s identity and the investor’s purpose in acquiring those shares.

The Fund’s Adviser identifies Activist Leader® investors utilizing a proprietary methodology based upon qualitative elements, including research into the effectiveness of activist investors’ achievement of stated objectives and creation of positive shareholder returns in positions that were the subject of a 13D filing by them. Because the Adviser’s identification of Activist Leaders® investors is based on ongoing research, the list of Activist Leaders® investors may change over time.

The Fund will be invested in equity securities of companies listed on a U.S. exchange with market capitalizations of at least \$1 billion at the time of initial purchase. The Fund may focus its investments in a particular sector, industry or group of industries. The Fund may utilize derivatives, such as equity options and total return swap agreements, to seek to achieve its objective and for hedging purposes.

The Fund may engage in active and frequent trading.

Principal Investment Risks: As with all funds, there is the risk that you could lose money through your investment in the Fund. The Fund is not intended to be a complete investment program but rather one component of a diversified investment portfolio. An investment in the Fund is not guaranteed to achieve its investment objective; is not a deposit with a bank; is not insured, endorsed or guaranteed by the Federal Deposit Insurance Corporation or any other government agency; and is subject to investment risks. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. Many factors affect the Fund’s net asset value and performance. As with any fund, there is no guarantee that the Fund will achieve its goal. Each risk summarized below is a principal risk of investing in the Fund and different risks may be more significant at different times depending upon market conditions or other factors.

- *Market Risk.* Overall market risk may affect the value of individual instruments in which the Fund invests. The Fund is subject to the risk that the securities markets will move down, sometimes rapidly and unpredictably, based on overall economic conditions and other factors, which may negatively affect the Fund's performance. Factors such as domestic and foreign (non-U.S.) economic growth and market conditions, real or perceived adverse economic or political conditions, inflation, changes in interest rate levels, lack of liquidity in the bond or other markets, volatility in the equities market or other securities markets or adverse investor sentiment and political events affect the securities markets. Securities markets also may experience long periods of decline in value. When the value of the Fund's investments goes down, your investment in the Fund decreases in value and you could lose money.

Local, state, regional, national or global events such as war, acts of terrorism, the spread of infectious illness or other public health issues, recessions, or other events could have a significant impact on the Fund and its investments and could result in decreases to the Fund's net asset value. Political, geopolitical, natural and other events, including war, terrorism, trade disputes, government shutdowns, market closures, natural and environmental disasters, epidemics, pandemics and other public health crises and related events and governments' reactions to such events have led, and in the future may lead, to economic uncertainty, decreased economic activity, increased market volatility and other disruptive effects on U.S. and global economies and markets. Such events may have significant adverse direct or indirect effects on the Fund and its investments. For example, a widespread health crisis such as a global pandemic could cause substantial market volatility, exchange trading suspensions and closures, impact the ability to complete redemptions, and affect Fund performance. A health crisis may exacerbate other pre-existing political, social and economic risks. In addition, the increasing interconnectedness of markets around the world may result in many markets being affected by events or conditions in a single country or region or events affecting a single or small number of issuers.

- *ETF Structure Risks.* The Fund is structured as an ETF and as a result is subject to special risks, including:
 - *Not Individually Redeemable.* Shares are not individually redeemable and may be redeemed by the Fund at net asset value (NAV) only in large blocks known as "Creation Units." You may incur brokerage costs purchasing enough shares to constitute a Creation Unit.
 - *Trading Issues.* Trading in shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in shares inadvisable, such as extraordinary market volatility. There can be no assurance that shares will continue to meet the listing requirements of the Exchange. An active trading market for the Fund's shares may not be developed or maintained. If the Fund's shares are traded outside a collateralized settlement system, the number of financial institutions that can act as authorized participants that can post collateral on an agency basis is limited, which may limit the market for the Fund's shares.
 - *Market Price Variance Risk.* The market prices of shares will fluctuate in response to changes in NAV and supply and demand for shares and will include a "bid-ask spread" charged by the exchange specialists, market makers or other participants that trade the particular security. There may be times when the market price and the NAV vary significantly. This means shares may trade at a discount or premium to NAV. If a shareholder purchases shares at a time when the market price is at a premium to the NAV or sells shares at a time when the market price is at a discount to NAV, the shareholder may sustain losses if the shares are sold at a price that is less than the price paid by the shareholder for the shares.
 - In times of market stress, such as what was experienced during the COVID-19 pandemic, market makers may step away from their role market making in shares of ETFs and in executing trades, which can lead to differences between the market value of Fund shares and the Fund's net asset value.
 - The market price for the Fund's shares may deviate from the Fund's net asset value, particularly during times of market stress, with the result that investors may pay significantly more or significantly less for Fund shares than the Fund's net asset value, which is reflected in the bid and ask price for Fund shares or in the closing price.
 - When all or a portion of an ETFs underlying securities trade in a market that is closed when the market for the Fund's shares is open, there may be changes from the last quote of the closed market and the quote from the Fund's domestic trading day, which could lead to differences between the market value of the Fund's shares and the Fund's net asset value.
 - In stressed market conditions, the market for the Fund's shares may become less liquid in response to the deteriorating liquidity of the Fund's portfolio. This adverse effect on the liquidity of the Fund's shares may, in turn, lead to differences between the market value of the Fund's shares and the Fund's net asset value.
- *Quantitative Investing Risk.* The Adviser may use proprietary computer trading modeling systems to implement its investment strategies for the Fund. Investments selected using these models may perform differently than the market as a whole or from their expected performance as a result of the factors used in the models, the weight placed on each factor, changes from the factors' historical trends and technical issues in the construction and implementation of the models. There is no assurance that the models are complete or accurate, or representative of future market cycles, nor will they necessarily be beneficial to the Fund if they are accurate. These systems may negatively affect Fund performance for various reasons, including human judgment, inaccuracy of historical data and non-quantitative factors (such as market or trading system dysfunctions, investor fear or over-reaction).

- *Activist Risk.* An activist investor uses an equity stake in a company to put public pressure on the company's management team and board in order to achieve certain objectives such as the increase of shareholder value through changes in corporate policy or financing structure, or to reduce expenses. Shareholder activism can take any of several forms, including proxy battles, publicity campaigns, and negotiations with management. Although the Fund does not intend to invest in companies for the purpose of effecting change or influencing or controlling management itself, the Fund invests in companies that the Adviser believes have potential for capital appreciation resulting from such changes. The Adviser's evaluation of companies may prove incorrect, or the efforts which they invest may not be successful, or even if successful, may have unintended effects or cause the Fund's investment to lose value.
- *Equity Risk.* Equity securities are susceptible to general market fluctuations and volatile increases and decreases in value as market confidence in and perceptions of their issuers change. Factors that may influence the price of equity securities include developments affecting a specific company or industry, or the changing economic, political or market conditions.
- *Authorized Participant Concentration Risk.* To the extent that authorized participants are unable or otherwise unavailable to proceed with creation and/or redemption orders and no other authorized participant is able to create or redeem in their place, shares may trade at a discount to net asset value ("NAV") and may face delisting.
- *Active Trading Risk.* A higher portfolio turnover due to active and frequent trading will result in higher transaction and brokerage costs associated with the turnover which may reduce the Fund's return, unless the securities traded can be bought and sold without corresponding commission costs. Active trading of securities may also increase the Fund's realized capital gains and losses, which may affect the taxes you pay as a Fund shareholder.
- *Cybersecurity Risk.* There is risk to the Fund of an unauthorized breach and access to fund assets, customer data (including private shareholder information), or proprietary information, or the risk of an incident occurring that causes the Fund, the investment adviser, custodian, transfer agent, distributor and other service providers and financial intermediaries to suffer data breaches, data corruption or lose operational functionality. Successful cyber-attacks or other cyber-failures or events affecting the Fund or its service providers may adversely impact the Fund or its shareholders.
- *Derivatives Risk.* The derivative instruments in which the Fund may invest, including options, total return swaps and other similar instruments, may be more volatile than other instruments and may be subject to unanticipated market movements, which are potentially unlimited. The risks associated with investments in derivatives also include liquidity, interest rate, market, credit and management risks, mispricing or improper valuation. Changes in the market value of the derivative may not correlate perfectly with the underlying asset, rate or index, and the Fund could lose more than the principal amount invested. In addition, if a derivative is being used for hedging purposes there can be no assurance given that each derivative position will achieve a perfect correlation with the security or currency against which it is being hedged, or that a particular derivative position will be available when sought by the portfolio manager.
- *Fluctuation of Net Asset Value Risk.* Unlike conventional ETFs, the Fund is not an index fund. The Fund is actively managed and does not seek to replicate the performance of a specified Index. The NAV of the Fund's shares will generally fluctuate with changes in the market value of the Fund's holdings. The market prices of the shares will generally fluctuate in accordance with changes in NAV as well as the relative supply of and demand for the shares on the Exchange. The Adviser cannot predict whether the shares will trade below, at or above their NAV. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for the shares will be closely related to, but not identical to, the same forces influencing the prices of the Fund's holdings trading individually or in the aggregate at any point in time. Actively managed ETFs have a limited trading history and, therefore, there can be no assurance as to whether and/or the extent to which the shares will trade at premiums or discounts to NAV.
- *Gap Risk.* The Fund is subject to the risk that a stock price or derivative value will change dramatically from one level to another with no trading in between and/or before the Fund can exit the investment. Usually such movements occur when there are adverse news announcements, which can cause a stock price or derivative value to drop substantially from the previous day's closing price. Trading halts may lead to gap risk. Trading halts may lead to gap risk.
- *Information Technology Sector Risk.* Information technology companies face intense competition, both domestically and internationally, which may have an adverse effect on their profit margins. Like other technology companies, information technology companies may have limited product lines, markets, financial resources or personnel. The products of information technology companies may face obsolescence due to rapid technological developments, frequent new product introduction, unpredictable changes in growth rates and competition for the services of qualified personnel. Companies in the information technology sector are heavily dependent on patent and intellectual property rights. The loss or impairment of these rights may adversely affect the profitability of these companies.
- *Management Risk.* The Fund's investment strategies may not result in an increase in the value of your investment or in overall performance equal to other similar investment vehicles having similar investment strategies.

- *Market Capitalization Risk.* The Fund's anticipated weighting towards larger-sized companies subjects the Fund to the risk that larger companies may not be able to attain the high growth rates of successful smaller companies, especially during strong economic periods, and that they may be less capable of responding quickly to competitive challenges and industry changes. Because the Fund may invest in companies of any size, its share price could be more volatile than a fund that invests only in large companies. Small and medium-sized companies typically have less experienced management, narrower product lines, more limited financial resources, and less publicly available information than larger companies. The earnings and prospects of small and medium sized companies are more volatile than larger companies and may experience higher failure rates than larger companies.
- *Market Events Risk.* There has been increased volatility, depressed valuations, decreased liquidity and heightened uncertainty in the financial markets during the past several years, including what was experienced in 2020. These conditions are an inevitable part of investing in capital markets and may continue, recur, worsen or spread. The U.S. government and the Federal Reserve, as well as certain foreign governments and central banks, have taken steps to support financial markets, including by keeping interest rates at historically low levels. This and other government intervention may not work as intended, particularly if the efforts are perceived by investors as being unlikely to achieve the desired results. The U.S. government and the Federal Reserve may reduce market support activities. Such reduction, including interest rate increases, could negatively affect financial markets generally, increase market volatility and reduce the value and liquidity of securities in which the Fund invests. Policy and legislative changes in the United States and in other countries may also continue to contribute to decreased liquidity and increased volatility in the financial markets. The impact of these changes on the markets, and the practical implications for market participants, may not be fully known for some time.
- *New Fund Risk.* The Fund is recently formed. Investors bear the risk that the Fund may not grow to or maintain economically viable size, may not be successful in implementing its investment strategy, and may not employ a successful investment strategy, any of which could result in the Fund being liquidated at any time without shareholder approval and/or at a time that may not be favorable for certain shareholders. Such a liquidation could have negative tax consequences for shareholders.
- *Rules-Based Strategy Risk.* A rules-based investment strategy may not be successful on an ongoing basis or could contain unknown errors. In addition, the data used may be inaccurate or the computer programming used to create a rules-based investment strategy might contain one or more errors. Moreover, during periods of increased volatility or changing market conditions the commonality of portfolio holdings and similarities between strategies of rules-based managers may amplify losses.
- *Sector Risk.* The risk that if the Fund invests a significant portion of its total assets in certain issuers within the same economic sector, an economic, business or political development or natural or other event, including war, terrorism, natural and environmental disasters, epidemics, pandemics and other public health crisis, adversely affecting that sector may affect the value of the Fund's investments more than if the Fund's investments were not so concentrated.
- *Swap Risk.* Swap agreements are subject to the risk that the counterparty to the swap will default on its obligation to pay the Fund and the risk that the Fund will not be able to meet its obligations to pay the counterparty to the swap. In addition, there is the risk that a swap may be terminated by the Fund or the counterparty in accordance with its terms. If a swap were to terminate, the Fund may be unable to implement its investment strategies and the Fund may not be able to seek to achieve its investment objective.
- *Volatility Risk.* The Fund's investments may appreciate or decrease significantly in value over short periods of time. The value of an investment in the Fund's portfolio may fluctuate due to factors that affect markets generally or that affect a particular industry or sector. The value of an investment in the Fund's portfolio may also be more volatile than the market as a whole. This volatility may affect the Fund's net asset value per share, including by causing it to experience significant increases or declines in value over short periods of time. Events or financial circumstances affecting individual investments, industries or sectors may increase the volatility of the Fund.

Performance: Because the Fund has only recently commenced investment operations, no performance information is presented for the Fund at this time. In the future, performance information will be presented in this section of this Prospectus. In addition, shareholder reports containing financial and performance information will be available to shareholders semi-annually. Updated performance information is available at no cost by visiting www.leadersharetfs.com or by calling (480) 757-4277.

Investment Adviser: Redwood Investment Management, LLC (the “Adviser”) serves as investment adviser to the Fund.

Portfolio Managers: The Fund is managed by a team comprised of Michael T. Messinger, Portfolio Manager and Principal of Redwood, Richard M. Duff, Portfolio Manager and President of Redwood, and Michael T. Cheung, Portfolio Manager and Head of Quantitative Research. Mr. Messinger, Mr. Duff, and Mr. Cheung have managed the Fund since its inception in October, 2020.

Purchase and Sale of Fund Shares: The Fund will issue and redeem shares at NAV only in large blocks of 25,000 shares (each block of shares is called a “Creation Unit”). Creation Units are issued and redeemed for cash and/or in-kind for securities. Except when aggregated in Creation Units, the shares are not redeemable securities of the Fund.

Shares of the Fund are listed for trading on the New York Stock Exchange (“NYSE”) (the “Exchange”) and trade at market prices rather than NAV. Individual shares of the Fund may only be purchased and sold in secondary market transactions through a broker or dealer at market price. Because shares trade at market prices, rather than NAV, shares of the Fund may trade at a price that is greater than NAV (*i.e.*, a premium), or less than NAV (*i.e.*, a discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market (the “bid-ask spread”).

Recent information, including information about the Fund’s NAV, market price, premiums and discounts, and bid-ask spreads, is included on the Fund’s website at www.leadersharetfs.com.

Tax Information: The Fund’s distributions generally will be taxable at ordinary income or long-term capital gain rates. A sale of shares may result in capital gain or loss.

Payments to Broker-Dealers and Other Financial Intermediaries: If you purchase shares of the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies, including the Adviser, may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.

FUND SUMMARY: LEADERSHARES® ALPHAFACOR® TACTICAL FOCUSED ETF

Investment Objective: The LeaderShares® AlphaFactor® Tactical Focused ETF (the “Tactical ETF” or the “Fund”) seeks to generate long term capital growth.

Fees and Expenses of the Fund: This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund. You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fee ⁽¹⁾	0.99%
Distribution (12b-1) and Service Fees	0.00%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.99%

(1) The Fund’s adviser provides investment advisory service, and pays most of the Fund’s operating expenses (except all brokerage fees and commissions, taxes, borrowing costs (such as dividend expense on securities sold short and interest), fees and expenses of other investment companies in which the Fund may invest, or extraordinary expenses such as litigation) in return for a “unitary fee.”

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based upon these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$101	\$315	\$547	\$1,213

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund’s performance. For the fiscal period ended October 31, 2020, the Fund’s Portfolio Turnover rate was 0% of the average value of its portfolio.

Principal Investment Strategies: The Fund is an actively managed exchange-traded fund (“ETF”) that employs an investment approach that utilizes a quantitative factor-based investment methodology focused on U.S. equities. The Adviser selects stocks based on a number of characteristics that include, but are not limited to, net share count reduction, free cash flow growth, dividend yield, volatility and debt/asset ratios. The final selection of stocks is based on market characteristics including, but not limited to, liquidity and market capitalization. The Fund expects the average daily trading volume of shares in companies being selected to be in excess of 400,000 shares per day at the time of purchase, however average daily trading volume may change due to market fluctuations. In addition, the Fund expects the market capitalization of the companies in which it invests to be \$1 billion and greater, however this could change due to market fluctuations. The Fund will typically be invested in a diversified portfolio of equity securities, or investments that are economically tied to equity securities (*i.e.*, derivatives) such as equity options, of companies with market capitalizations of at least \$1 billion at the time of initial purchase. The Adviser employs a multi-factor tactical risk management overlay that seeks to identify periods of above average risk. **At times identified by the Adviser as above average risk, the Fund may exit positions in equity securities and become comprised primarily of money market instruments such as treasury bills, certificates of deposit and commercial paper and other short-term instruments, money market funds, or U.S. government bonds.** Such investments can either be direct or through investments in other investment companies, including exchange-traded funds (“ETFs”). In identifying a time as above average risk, the Fund will consider multiple factors including negative market performance and negative market technical indicators such as advance versus decline breadth, as well as a proprietary set of supply and demand and economic factors.

The Fund may focus its investments in a particular sector, industry or group of industries. The Fund may utilize derivatives, such as equity options and total return swap agreements, to seek to achieve its objective and for hedging purposes.

The Fund may engage in active and frequent trading.

Principal Investment Risks: As with all funds, there is the risk that you could lose money through your investment in the Fund. The Fund is not intended to be a complete investment program but rather one component of a diversified investment portfolio. An investment in the Fund is not guaranteed to achieve its investment objective; is not a deposit with a bank; is not insured, endorsed or guaranteed by the Federal Deposit Insurance Corporation or any other government agency; and is subject to investment risks. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. Many factors affect the Fund's net asset value and performance. As with any fund, there is no guarantee that the Fund will achieve its goal. Each risk summarized below is a principal risk of investing in the Fund and different risks may be more significant at different times depending upon market conditions or other factors.

The Fund may be subject to the risks described below through its own direct investments and indirectly through its investments in other investment companies, such as ETFs.

- **Market Risk.** Overall market risk may affect the value of individual instruments in which the Fund invests. The Fund is subject to the risk that the securities markets will move down, sometimes rapidly and unpredictably, based on overall economic conditions and other factors, which may negatively affect the Fund's performance. Factors such as domestic and foreign (non-U.S.) economic growth and market conditions, real or perceived adverse economic or political conditions, inflation, changes in interest rate levels, lack of liquidity in the bond or other markets, volatility in the equities market or other securities markets or adverse investor sentiment and political events affect the securities markets. Securities markets also may experience long periods of decline in value. When the value of the Fund's investments goes down, your investment in the Fund decreases in value and you could lose money.

Local, state, regional, national or global events such as war, acts of terrorism, the spread of infectious illness or other public health issues, recessions, or other events could have a significant impact on the Fund and its investments and could result in decreases to the Fund's net asset value. Political, geopolitical, natural and other events, including war, terrorism, trade disputes, government shutdowns, market closures, natural and environmental disasters, epidemics, pandemics and other public health crises and related events and governments' reactions to such events have led, and in the future may lead, to economic uncertainty, decreased economic activity, increased market volatility and other disruptive effects on U.S. and global economies and markets. Such events may have significant adverse direct or indirect effects on the Fund and its investments. For example, a widespread health crisis such as a global pandemic could cause substantial market volatility, exchange trading suspensions and closures, impact the ability to complete redemptions, and affect Fund performance. A health crisis may exacerbate other pre-existing political, social and economic risks. In addition, the increasing interconnectedness of markets around the world may result in many markets being affected by events or conditions in a single country or region or events affecting a single or small number of issuers.

- **Active Trading Risk.** A higher portfolio turnover due to active and frequent trading will result in higher transaction and brokerage costs associated with the turnover which may reduce the Fund's return, unless the securities traded can be bought and sold without corresponding commission costs. Active trading of securities may also increase the Fund's realized capital gains and losses, which may affect the taxes you pay as a Fund shareholder.
- **Volatility Risk.** The Fund's investments may appreciate or decrease significantly in value over short periods of time. The value of an investment in the Fund's portfolio may fluctuate due to factors that affect markets generally or that affect a particular industry or sector. The value of an investment in the Fund's portfolio may also be more volatile than the market as a whole. This volatility may affect the Fund's net asset value per share, including by causing it to experience significant increases or declines in value over short periods of time. Events or financial circumstances affecting individual investments, industries or sectors may increase the volatility of the Fund.
- **ETF Structure Risks.** The Fund is structured as an ETF and as a result is subject to special risks, including:
 - **Not Individually Redeemable.** Shares are not individually redeemable and may be redeemed by the Fund at NAV only in large blocks known as "Creation Units." You may incur brokerage costs purchasing enough shares to constitute a Creation Unit.
 - **Trading Issues.** Trading in shares on the New York Stock Exchange (the "NYSE") may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in shares inadvisable, such as extraordinary market volatility. There can be no assurance that shares will continue to meet the listing requirements of the Exchange. An active trading market for the Fund's shares may not be developed or maintained. If the Fund's shares are traded outside a collateralized settlement system, the number of financial institutions that can act as authorized participants that can post collateral on an agency basis is limited, which may limit the market for the Fund's shares.
 - **Market Price Variance Risk.** The market prices of shares will fluctuate in response to changes in NAV and supply and demand for shares and will include a "bid-ask spread" charged by the exchange specialists, market makers or other participants that trade the particular security. There may be times when the market price and the NAV vary significantly. This means shares may trade at a discount or premium to NAV. If a shareholder purchases shares at a time when the market price is at a premium to the NAV or sells shares at a time when the market price is at a discount to NAV, the shareholder may sustain losses if the shares are sold at a price that is less than the price paid by the shareholder for the shares.

- In times of market stress, such as what was experienced during the COVID-19 pandemic, market makers may step away from their role market making in shares of ETFs and in executing trades, which can lead to differences between the market value of Fund shares and the Fund's net asset value.
 - The market price for the Fund's shares may deviate from the Fund's net asset value, particularly during times of market stress, with the result that investors may pay significantly more or significantly less for Fund shares than the Fund's net asset value, which is reflected in the bid and ask price for Fund shares or in the closing price.
 - When all or a portion of an ETFs underlying securities trade in a market that is closed when the market for the Fund's shares is open, there may be changes from the last quote of the closed market and the quote from the Fund's domestic trading day, which could lead to differences between the market value of the Fund's shares and the Fund's net asset value.
 - In stressed market conditions the market for the Fund's shares may become less liquid in response to the deteriorating liquidity of the Fund's portfolio. This adverse effect on the liquidity of the Fund's shares may, in turn, lead to differences between the market value of the Fund's shares and the Fund's net asset value.
- *Quantitative Investing Risk.* The Adviser may use proprietary computer trading modeling systems to implement its investment strategies for the Fund. Investments selected using these models may perform differently than the market as a whole or from their expected performance as a result of the factors used in the models, the weight placed on each factor, changes from the factors' historical trends and technical issues in the construction and implementation of the models. There is no assurance that the models are complete or accurate, or representative of future market cycles, nor will they necessarily be beneficial to the Fund if they are accurate. These systems may negatively affect Fund performance for various reasons, including human judgment, inaccuracy of historical data and non-quantitative factors (such as market or trading system dysfunctions, investor fear or over-reaction).
- *Equity Risk.* Equity securities are susceptible to general market fluctuations and volatile increases and decreases in value as market confidence in and perceptions of their issuers change. Factors that may influence the price of equity securities include developments affecting a specific company or industry, or the changing economic, political or market conditions.
- *Authorized Participant Concentration Risk.* To the extent that authorized participants are unable or otherwise unavailable to proceed with creation and/or redemption orders and no other authorized participant is able to create or redeem in their place, shares may trade at a discount to net asset value ("NAV") and may face delisting.
- *Cash Positions Risk.* The Fund may hold a significant position in cash and/or cash equivalent securities. When the Fund's investment in cash or cash equivalent securities increases, the Fund may not participate in market advances or declines to the same extent that it would if the Fund were more fully invested.
- *Cybersecurity Risk.* There is risk to the Fund of an unauthorized breach and access to fund assets, customer data (including private shareholder information), or proprietary information, or the risk of an incident occurring that causes the Fund, the investment adviser, custodian, transfer agent, distributor and other service providers and financial intermediaries to suffer data breaches, data corruption or lose operational functionality. Successful cyber-attacks or other cyber-failures or events affecting the Fund or its service providers may adversely impact the Fund or its shareholders.
- *Derivatives Risk.* The derivative instruments in which the Fund may invest, including futures, options, credit default swaps, total return swaps, repurchase agreements and other similar instruments, may be more volatile than other instruments and may be subject to unanticipated market movements, which are potentially unlimited. The risks associated with investments in derivatives also include liquidity, interest rate, market, credit and management risks, mispricing or improper valuation. Changes in the market value of the derivative may not correlate perfectly with the underlying asset, rate or index, and the Fund could lose more than the principal amount invested. In addition, if a derivative is being used for hedging purposes there can be no assurance given that each derivative position will achieve a perfect correlation with the security or currency against which it is being hedged, or that a particular derivative position will be available when sought by the portfolio manager.
- *Fluctuation of Net Asset Value Risk.* Unlike conventional ETFs, the Fund is not an index fund. The Fund is actively managed and does not seek to replicate the performance of a specified index. The NAV of the Fund's shares will generally fluctuate with changes in the market value of the Fund's holdings. The market prices of the shares will generally fluctuate in accordance with changes in NAV as well as the relative supply of and demand for the shares on the Exchange. The Adviser cannot predict whether the shares will trade below, at or above their NAV. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for the shares will be closely related to, but not identical to, the same forces influencing the prices of the Fund's holdings trading individually or in the aggregate at any point in time. Actively managed ETFs have a limited trading history and, therefore, there can be no assurance as to whether and/or the extent to which the shares will trade at premiums or discounts to NAV.

- *Focus Risk.* The Fund generally expects to invest in approximately 30 stocks at any given time, and as a result, the Fund's performance may be more volatile than the performance of funds holding more securities.
- *Gap Risk.* The Fund is subject to the risk that a stock price or derivative value will change dramatically from one level to another with no trading in between and/or before the Fund can exit the investment. Usually such movements occur when there are adverse news announcements, which can cause a stock price or derivative value to drop substantially from the previous day's closing price. Trading halts may lead to gap risk. Trading halts may lead to gap risk.
- *Investment Companies and ETFs Risk.* When the Fund invests in other investment companies, including ETFs, it will bear additional expenses based on its pro rata share of the other investment company's or ETF's operating expenses, including the management fees of the investment company or ETF in addition to those paid by the Fund. The risk of owning an investment company or ETF generally reflects the risks of owning the underlying investments the investment company or ETF holds. The Fund also will incur brokerage costs when it purchases and sells ETFs. The Fund may invest in inverse ETFs, which may result in increased volatility and will magnify the Fund's losses or gains. During periods of market volatility, inverse ETFs may not perform as expected.
- *Management Risk.* The Fund's investment strategies may not result in an increase in the value of your investment or in overall performance equal to other similar investment vehicles having similar investment strategies. In addition, the Fund's tactical asset allocation strategy may be unsuccessful and may cause the Fund to miss attractive investment opportunities while in a defensive position.
- *Market Capitalization Risk.* The Fund's anticipated weighting towards larger-sized companies subjects the Fund to the risk that larger companies may not be able to attain the high growth rates of successful smaller companies, especially during strong economic periods, and that they may be less capable of responding quickly to competitive challenges and industry changes. Because the Fund may invest in companies of any size, its share price could be more volatile than a fund that invests only in large companies. Small and medium-sized companies typically have less experienced management, narrower product lines, more limited financial resources, and less publicly available information than larger companies. The earnings and prospects of small and medium sized companies are more volatile than larger companies and may experience higher failure rates than larger companies.
- *Market Events Risk.* There has been increased volatility, depressed valuations, decreased liquidity and heightened uncertainty in the financial markets during the past several years, including what was experienced in 2020. These conditions are an inevitable part of investing in capital markets and may continue, recur, worsen or spread. The U.S. government and the Federal Reserve, as well as certain foreign governments and central banks, have taken steps to support financial markets, including by keeping interest rates at historically low levels. This and other government intervention may not work as intended, particularly if the efforts are perceived by investors as being unlikely to achieve the desired results. The U.S. government and the Federal Reserve may reduce market support activities. Such reduction, including interest rate increases, could negatively affect financial markets generally, increase market volatility and reduce the value and liquidity of securities in which the Fund invests. Policy and legislative changes in the United States and in other countries may also continue to contribute to decreased liquidity and increased volatility in the financial markets. The impact of these changes on the markets, and the practical implications for market participants, may not be fully known for some time.
- *Money Market Instrument Risk.* The value of money market instruments may be affected by changing interest rates and by changes in the credit ratings of the investments. An investment in a money market fund is not insured or guaranteed by the FDIC or any other government agency. It is possible to lose money by investing in a money market fund. Recently, the SEC adopted money market fund reform intended to address potential systemic risks associated with money market funds and to improve transparency for money market fund investors. The money market fund reforms may impact the structure, operations and return potential of the money market funds in which the Fund invests.
- *New Fund Risk.* The Fund is recently formed. Investors bear the risk that the Fund may not grow to or maintain economically viable size, may not be successful in implementing its investment strategy, and may not employ a successful investment strategy, any of which could result in the Fund being liquidated at any time without shareholder approval and/or at a time that may not be favorable for certain shareholders. Such a liquidation could have negative tax consequences for shareholders.
- *Rules-Based Strategy Risk.* A rules-based investment strategy may not be successful on an ongoing basis or could contain unknown errors. In addition, the data used may be inaccurate or the computer programming used to create a rules-based investment strategy might contain one or more errors. Moreover, during periods of increased volatility or changing market conditions the commonality of portfolio holdings and similarities between strategies of rules-based managers may amplify losses.

- *Sector Risk.* The risk that if the Fund invests a significant portion of its total assets in certain issuers within the same economic sector, an economic, business or political development or natural or other event, including war, terrorism, natural and environmental disasters, epidemics, pandemics and other public health crisis, adversely affecting that sector may affect the value of the Fund's investments more than if the Fund's investments were not so concentrated.
- *Swap Risk.* Swap agreements are subject to the risk that the counterparty to the swap will default on its obligation to pay the Fund and the risk that the Fund will not be able to meet its obligations to pay the counterparty to the swap. In addition, there is the risk that a swap may be terminated by the Fund or the counterparty in accordance with its terms. If a swap were to terminate, the Fund may be unable to implement its investment strategies and the Fund may not be able to seek to achieve its investment objective.
- *Tactical Overlay Strategy Risk.* The Adviser employs a multi-factor tactical risk management overlay that seeks to identify periods of above average risk and exit positions in equity securities during such periods of above average risk. The failure of the overlay strategy to timely or properly identify periods of above average risk may prevent the Fund from avoiding losses in bad markets or may cause the Fund to miss gains in good markets.
- *U.S. Government Securities Risk.* The U.S. government is not obligated to provide financial support to its agencies, instrumentalities or sponsored enterprises if it is not obligated to do so by law. Certain U.S. government securities purchased by the Fund may not be backed by the full faith and credit of the United States. It is possible that the issuers of such securities will not have the funds to meet their payment obligations in the future.

Performance: Because the Fund has only recently commenced investment operations, no performance information is presented for the Fund at this time. In the future, performance information will be presented in this section of this Prospectus. In addition, shareholder reports containing financial and performance information will be available to shareholders semi-annually. Updated performance information is available at no cost by visiting www.leadersharetfs.com or by calling (480) 757-4277.

Investment Adviser: Redwood Investment Management, LLC (the "Adviser") serves as investment adviser to the Fund.

Portfolio Manager: The Fund is managed by a team comprised of Michael T. Messinger, Portfolio Manager and Principal of Redwood, Richard M. Duff, Portfolio Manager and President of Redwood, and Michael T. Cheung, Portfolio Manager and Head of Quantitative Research. Mr. Messinger, Mr. Duff, and Mr. Cheung have managed the Fund since its inception in October, 2020.

Purchase and Sale of Fund Shares: The Fund will issue and redeem shares at NAV only in large blocks of 25,000 shares (each block of shares is called a "Creation Unit"). Creation Units are issued and redeemed for cash and/or in-kind for securities. Except when aggregated in Creation Units, the shares are not redeemable securities of the Fund.

Shares of the Fund are listed for trading on the New York Stock Exchange ("NYSE") (the "Exchange") and trade at market prices rather than NAV. Individual shares of the Fund may only be purchased and sold in secondary market transactions through a broker or dealer at market price. Because shares trade at market prices, rather than NAV, shares of the Fund may trade at a price that is greater than NAV (*i.e.*, a premium), or less than NAV (*i.e.*, a discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market (the "bid-ask spread").

Recent information, including information about the Fund's NAV, market price, premiums and discounts, and bid-ask spreads, is included on the Fund's website at www.leadersharetfs.com.

Tax Information: The Fund's distributions generally will be taxable at ordinary income or long-term capital gain rates. A sale of shares may result in capital gain or loss.

Payments to Broker-Dealers and Other Financial Intermediaries: If you purchase shares of the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies, including the Adviser, may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

FUND SUMMARY – LEADERSHARES® ALPHAFACOR® US CORE EQUITY ETF

Investment Objective: The Fund seeks to provide investment results that correspond generally, before fees and expenses, to the performance of the AlphaFactor® US Core Equity Index.

Fees and Expenses of the Fund: This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund. You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fee ⁽¹⁾	0.75%
Distribution and Service(12b-1) Fees	0.00%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.75%

(1) The Fund's adviser provides investment advisory service, and pays most of the Fund's operating expenses (except all brokerage fees and commissions, taxes, borrowing costs (such as dividend expense on securities sold short and interest), fees and expenses of other investment companies in which the Fund may invest, or extraordinary expenses such as litigation) in return for a "unitary fee."

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based upon these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$77	\$240	\$417	\$930

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund's performance. For the fiscal year ended October 31, 2020 the Fund's portfolio turnover rate was 181% of the average value of its portfolio.

Principal Investment Strategies: The Fund seeks to replicate the Adviser's proprietary index, the AlphaFactor® US Core Equity Index (the "Index"). The Index utilizes a quantitative rules-based investment methodology that applies a multi-factor ranking process and is focused on the largest 1,000 U.S. common stocks based on market capitalization. Companies within this group of top 1,000 market capitalization may be considered large or mid-cap companies. As of January 31, 2021, the market capitalization range of this universe of companies is between \$5.6 billion and over \$2.0 trillion. Due to future market fluctuations, the market capitalization of this universe may be lower or higher at any given time. The methodology selects stocks based on a number of characteristics that include, but are not limited to, net share count reduction, free cash flow growth, and debt/asset ratios. The final selection of stocks is based on market characteristics including, but not limited to, liquidity and market capitalization.

Under normal circumstances, at least 80% of the Fund's net assets, including any borrowings for investment purposes, will be invested in a diversified portfolio of equity securities of U.S. common stocks included in the Index. The Fund may also invest up to 20% of its assets in certain equity options, index options, swap contracts or other derivatives, as related to its Index, as well as in securities and other instruments not included in its Index but which the Adviser believes will help the Fund track its Index. Federal law generally requires the Fund to segregate or " earmark" liquid assets or otherwise cover the marked-to-market exposure of its derivatives.

As of December 31, 2020, the Index was comprised of one hundred issuers. It is rebalanced to equal weight and reconstituted on a quarterly basis. The composition of the Index will change over time.

The Fund uses as its index calculation agent Solactive, AG ("Calculation Agent"), an organization that is independent of the Fund and the Adviser. The Adviser determines the composition and relative weightings of the securities in the Index and the Calculation Agent publishes information regarding the market value of the Index.

The Fund uses a "passive" or indexing approach to attempt to approximate the investment performance of the Index by investing in a portfolio of securities that generally replicates the Index. The Fund may concentrate its investments in certain sectors, which may include the information technology sector, industrials sector, consumer discretionary sector, and financials sector, to the extent that the Index concentrates in such sectors.

Principal Investment Risks. As with all funds, there is the risk that you could lose money through your investment in the Fund. The Fund is not intended to be a complete investment program but rather one component of a diversified investment portfolio. An investment in the Fund is not guaranteed to achieve its investment objective; is not a deposit with a bank; is not insured, endorsed or guaranteed by the Federal Deposit Insurance Corporation or any other government agency; and is subject to investment risks. The value of your investment in the Fund, as well as the amount of return you receive on your investment may fluctuate significantly. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. Many factors affect the Fund's net asset value and performance. Each risk summarized below is a principal risk of investing in the Fund and different risks may be more significant at different times depending upon market conditions or other factors.

Market Risk. Overall market risk may affect the value of individual instruments in which the Fund invests. The Fund is subject to the risk that the securities markets will move down, sometimes rapidly and unpredictably, based on overall economic conditions and other factors, which may negatively affect the Fund's performance. Factors such as domestic and foreign (non-U.S.) economic growth and market conditions, real or perceived adverse economic or political conditions, inflation, changes in interest rate levels, lack of liquidity in the bond and other markets, volatility in the equities market or adverse investor sentiment affect the securities markets and political events affect the securities markets. When the value of the Fund's investments goes down, your investment in the Fund decreases in value and you could lose money.

Local, state, regional, national or global events such as war, acts of terrorism, the spread of infectious illness or other public health issues, recessions, or other events could have a significant impact on the Fund and its investments and could result in decreases to the Fund's net asset value. Political, geopolitical, natural and other events, including war, terrorism, trade disputes, government shutdowns, market closures, natural and environmental disasters, epidemics, pandemics and other public health crises and related events and governments' reactions to such events have led, and in the future may lead, to economic uncertainty, decreased economic activity, increased market volatility and other disruptive effects on U.S. and global economies and markets. Such events may have significant adverse direct or indirect effects on the Fund and its investments. For example, a widespread health crisis such as a global pandemic could cause substantial market volatility, exchange trading suspensions and closures, impact the ability to complete redemptions, and affect Fund performance. A health crisis may exacerbate other pre-existing political, social and economic risks. In addition, the increasing interconnectedness of markets around the world may result in many markets being affected by events or conditions in a single country or region or events affecting a single or small number of issuers.

Equity Risk. Equity securities are susceptible to general market fluctuations and volatile increases and decreases in value as market confidence in and perceptions of their issuers change. Factors that may influence the price of equity securities include developments affecting a specific company or industry, or the changing economic, political or market conditions.

Index Tracking Error Risk. As with all index funds, the performance of the Fund and the Index may differ from each other for a variety of reasons. For example, the Fund incurs operating expenses and portfolio transaction costs not incurred by the Index. In addition, the Fund may not be fully invested in the securities of the Index at all times, may deviate from the relative weightings of the Index or may hold securities not included in the Index. Tracking error risk may be heightened during times of market volatility or other unusual market conditions.

Market Events Risk. There has been increased volatility, depressed valuations, decreased liquidity and heightened uncertainty in the financial markets during the past several years including what was experienced in 2020. These conditions may continue, recur, worsen or spread. The U.S. government and the Federal Reserve, as well as certain foreign governments and central banks, have taken steps to support financial markets, including by keeping interest rates at historically low levels. This and other government intervention may not work as intended, particularly if the efforts are perceived by investors as being unlikely to achieve the desired results. The U.S. government and the Federal Reserve may reduce market support activities. Such reduction, including interest rate increases, could negatively affect financial markets generally, increase market volatility and reduce the value and liquidity of securities in which the Fund invests. Policy and legislative changes in the United States and in other countries may also continue to contribute to decreased liquidity and increased volatility in the financial markets. The impact of these changes on the markets, and the practical implications for market participants, may not be fully known for some time.

Market Capitalization Risk. The Fund's anticipated weighting towards larger-sized companies subjects the Fund to the risk that larger companies may not be able to attain the high growth rates of successful smaller companies, especially during strong economic periods, and that they may be less capable of responding quickly to competitive challenges and industry changes. Because the Fund may invest in companies of any size, its share price could be more volatile than a fund that invests only in large companies. Small and medium-sized companies typically have less experienced management, narrower product lines, more limited financial resources, and less publicly available information than larger companies. The earnings and prospects of small and medium sized companies are more volatile than larger companies and may experience higher failure rates than larger companies. Medium sized companies normally have a lower trading volume than larger companies, which may tend to make their market price fall more disproportionately than larger companies in response to selling pressures.

Rules-Based Strategy Risk. A rules-based investment strategy may not be successful on an ongoing basis or could contain unknown errors. In addition, the data used may be inaccurate or the computer programming used to create a rules-based investment strategy might contain one or more errors. Moreover, during periods of increased volatility or changing market conditions the commonality of portfolio holdings and similarities between strategies of rules-based managers may amplify losses.

Active Trading Risk. A higher portfolio turnover may result in higher transaction and brokerage costs associated with the turnover which may reduce the Fund's return, unless the securities traded can be bought and sold without corresponding commission costs. Active trading of securities may also increase the Fund's realized capital gains and losses, which may affect the taxes you pay as a Fund shareholder.

Authorized Participant Concentration Risk. To the extent that authorized participants are unable or otherwise unavailable to proceed with creation and/or redemption orders and no other authorized participant is able to create or redeem in their place, shares may trade at a discount to net asset value (NAV) and may face delisting.

Calculation Methodology Risk. The Index relies on various sources of information to assess the criteria of issuers included in the Index, including information that may be based on assumptions and estimates. Neither the Fund, the Adviser, nor the Calculation Agent can offer assurances that the Index's calculation methodology or sources of information will provide an accurate assessment of included issuers or correct valuation of securities, nor can they guarantee the availability or timeliness of the production of the Index.

Concentration Risk. If the Fund invests a significant portion of its total assets in certain issuers within the same economic sector, an adverse economic, business or political development affecting that sector may affect the value of the Fund's investments more than if the Fund's investments were not so concentrated.

Consumer Discretionary Sector Risk. The success of consumer product manufacturers and retailers is tied closely to the performance of domestic and international economies, interest rates, exchange rates, competition, consumer confidence, changes in demographics and consumer preferences. Companies in the consumer discretionary sector depend heavily on disposable household income and consumer spending, and may be strongly affected by social trends and marketing campaigns. These companies may be subject to severe competition, which may have an adverse impact on their profitability. In addition, the impact of any epidemic, pandemic or natural disaster, or widespread fear that such events may occur, could negatively affect the global economy and, in turn, negatively affect companies in the consumer discretionary sector. A recent example is the negative impact on the consumer discretionary sector of the aggressive measures taken worldwide by governments in response to COVID-19, including closing borders, restricting international and domestic travel, and the imposition of prolonged quarantines of large populations, and by businesses, including changes to operations and reducing staff.

Derivatives Risk. The derivative instruments in which the Fund may invest in order to better track the Index may be more volatile than other instruments and may be subject to unanticipated market movements, which are potentially unlimited. The risks associated with investments in derivatives also include liquidity, interest rate, market, credit and management risks, mispricing or improper valuation. Changes in the market value of a derivative may not correlate perfectly with the underlying asset, rate or index, and the Fund could lose more than the principal amount invested. In addition, if a derivative is being used for hedging purposes there can be no assurance given that each derivative position will achieve a perfect correlation with the security or currency against which it is being hedged, or that a particular derivative position will be available when sought by the portfolio manager.

ETF Structure Risks. The Fund is structured as an ETF and as a result is subject to the special risks, including:

- *Not Individually Redeemable.* Shares are not individually redeemable and may be redeemed by the Fund at NAV only in large blocks known as "Creation Units." You may incur brokerage costs purchasing enough shares to constitute a Creation Unit.
- *Trading Issues.* Trading in shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in shares inadvisable, such as extraordinary market volatility. There can be no assurance that shares will continue to meet the listing requirements of the Exchange. An active trading market for the Fund's shares may not be developed or maintained. If the Fund's shares are traded outside a collateralized settlement system, the number of financial institutions that can act as authorized participants that can post collateral on an agency basis is limited, which may limit the market for the Fund's shares.
- *Market Price Variance Risk.* The market prices of shares will fluctuate in response to changes in NAV and supply and demand for shares and will include a "bid-ask spread" charged by the exchange specialists, market makers or other participants that trade the particular security. There may be times when the market price and the NAV vary significantly. This means that shares may trade at a discount or premium to NAV. If a shareholder purchases shares at a time when the market price is at a premium to the NAV or sells shares at a time when the market price is at a discount to NAV, the shareholder may sustain losses if the shares are sold at a price that is less than the price paid by the shareholders for the shares.
 - In times of market stress, such as what was experienced during the COVID-19 pandemic, market makers may step away from their role market making in shares of ETFs and in executing trades, which can lead to differences between the market value of Fund shares and the Fund's net asset value.
 - The market price for the Fund's shares may deviate from the Fund's net asset value, particularly during times of market stress, with the result that investors may pay significantly more or significantly less for Fund shares than the Fund's net asset value, which is reflected in the bid and ask price for Fund shares or in the closing price.
 - When all or a portion of an ETFs underlying securities trade in a market that is closed when the market for the Fund's shares is open, there may be changes from the last quote of the closed market and the quote from the Fund's domestic trading day, which could lead to differences between the market value of the Fund's shares and the Fund's net asset value.
 - In stressed market conditions, the market for the Fund's shares may become less liquid in response to the deteriorating liquidity of the Fund's portfolio. This adverse effect on the liquidity of the Fund's shares may, in turn, lead to differences between the market value of the Fund's shares and the Fund's net asset value.

Financials Sector Risk. The financials sector includes companies in the banks, capital markets, diversified financials, and insurance industry groups. Performance of companies in the financials sector may be adversely impacted by many factors, including, among others, changes in government regulations, economic conditions, and interest rates, credit rating downgrades, and decreased liquidity in credit markets. The extent to which the Fund may invest in a company that engages in securities-related activities or banking is limited by applicable law. The impact of changes in capital requirements and recent or future regulation of any individual financial company, or of the financials sector as a whole, cannot be predicted. In recent years, cyber-attacks and technology malfunctions and failures have become increasingly frequent in this sector and have caused significant losses to companies in this sector, which may negatively impact the Fund.

Fluctuation of Net Asset Value Risk. The NAV of the Fund's shares will generally fluctuate with changes in the market value of the Fund's holdings. The market prices of the shares will generally fluctuate in accordance with changes in NAV as well as the relative supply of and demand for the shares on the Exchange. The Adviser cannot predict whether the shares will trade below, at or above their NAV. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for the shares will be closely related to, but not identical to, the same forces influencing the prices of the Fund's holdings trading individually or in the aggregate at any point in time.

Gap Risk. The Fund is subject to the risk that a stock price or derivative value will change dramatically from one level to another with no trading in between and/or before the Fund can exit the investment. Usually such movements occur when there are adverse news announcements, which can cause a stock price or derivative value to drop substantially from the previous day's closing price. Trading halts may lead to gap risk.

Industrials Sector Risk. The industrials sector includes companies in the commercial and professional services and transportation industry groups, including companies engaged in the business of human capital management, business research and consulting, air freight and logistics, airlines, maritime shipping and transportation, railroads and trucking, transportation infrastructure, and aerospace and defense. The value of securities issued by companies in the industrials sector may be adversely affected by supply and demand changes related to their specific products or services and industrials sector products in general. The products of manufacturing companies may face obsolescence due to rapid technological developments and frequent new product introduction. Global events and changes in government regulations, economic conditions and exchange rates may adversely affect the performance of companies in the industrials sector. Companies in the industrials sector may be adversely affected by liability for environmental damage and product liability claims. The industrials sector may also be adversely affected by changes or trends in commodity prices, which may be influenced by unpredictable factors. Companies in the industrials sector, particularly aerospace and defense companies, may also be adversely affected by government spending policies because companies in this sector tend to rely to a significant extent on government demand for their products and services.

Information Technology Sector Risk. Information technology companies face intense competition, both domestically and internationally, which may have an adverse effect on their profit margins. Like other technology companies, information technology companies may have limited product lines, markets, financial resources or personnel. The products of information technology companies may face obsolescence due to rapid technological developments, frequent new product introduction, unpredictable changes in growth rates and competition for the services of qualified personnel. Companies in the information technology sector are heavily dependent on patent and intellectual property rights. The loss or impairment of these rights may adversely affect the profitability of these companies.

Management Risk. The risk that a strategy used by the Fund's investment adviser may fail to produce the intended results or that imperfections, errors or limitations in the tools and data used by the investment adviser may cause unintended results. Management risk includes the risk that the quantitative model used by the Fund's investment adviser may not perform as expected, particularly in volatile markets.

New Fund Risk. The Fund is recently formed. Investors bear the risk that the Fund may not grow to or maintain economically viable size, not be successful in implementing its investment strategy, and may not employ a successful investment strategy, any of which could result in the Fund being liquidated at any time without shareholder approval and/or at a time that may not be favorable for certain shareholders. Such a liquidation could have negative tax consequences for shareholders.

Passive Investment Risk. The Fund is not actively managed and its Adviser would not sell shares of an equity security due to current or projected underperformance of a security, industry, or sector, unless that security is removed from the Index or the selling of shares of that security is otherwise required upon a reconstitution of the Index as addressed in the Index methodology. The Fund invests in securities included in, or representative of securities included in, the Index, regardless of their investment merits. The Fund does not take defensive positions under any market conditions, including conditions that are adverse to the performance of the Fund.

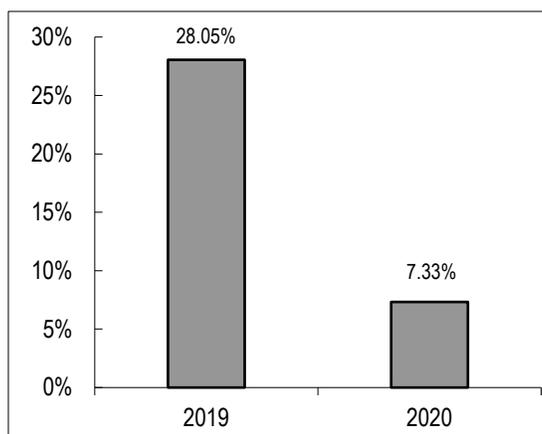

Portfolio Turnover Risk. The Fund may experience high portfolio turnover, including investments made on a shorter-term basis, which may lead to increased Fund expenses that may result in lower investment returns. A higher portfolio turnover may result in higher transactional and brokerage costs. High portfolio turnover may also result in higher short-term capital gains taxable to shareholders.

Retail Sector Risk. Retail and related industries can be significantly affected by the performance of the domestic and international economy, consumer confidence and spending, intense competition, changes in demographics, and changing consumer tastes and preferences. In addition, the impact of any epidemic, pandemic or natural disaster, or widespread fear that such events may occur, could negatively affect the global economy and, in turn, negatively affect companies in the retail sector. A recent example is the negative impact on the retail sector of the aggressive measures taken worldwide by governments in response to COVID-19, including closing borders, restricting international and domestic travel, and the imposition of prolonged quarantines of large populations, and by businesses, including changes to operations and reducing staff.

Volatility Risk. The Fund’s investments may appreciate or decrease significantly in value over short periods of time. The value of an investment in the Fund’s portfolio may fluctuate due to factors that affect markets generally or that affect a particular industry or sector. The value of an investment in the Fund’s portfolio may also be more volatile than the market as a whole. This volatility may affect the Fund’s net asset value per share, including by causing it to experience significant increases or declines in value over short periods of time. Events or financial circumstances affecting individual investments, industries or sectors may increase the volatility of the Fund.

Performance: The bar chart and performance table below show the variability of the Fund’s returns, which is some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year to year and by showing the Fund’s one-year and since inception performance compared with those of a broad measure of market performance. The bar chart shows performance of the Fund’s shares for each calendar year since the Fund’s inception. The performance table compares the performance of the Fund over time to the performance of a broad-based securities market index. You should be aware that the Fund’s past performance (before and after taxes) is not necessarily an indication of how the Fund will perform in the future. Updated performance information will be available at no cost by visiting www.leadersharetfs.com or by calling 1-480-757-4277.

Performance Bar Chart For Calendar Years Ended December 31st:

Highest Quarter:	06/30/2020	23.65%
Lowest Quarter:	03/31/2020	-29.26%

**Performance Table
Average Annual Total Returns
(For the year ended December 31, 2020)**

	One Year	Since Inception⁽¹⁾
Return before taxes	7.33%	7.05%
Return after taxes on Distributions	7.16%	6.87%
Return after taxes on Distributions and Sale of Fund Shares	4.41%	5.39%
S&P 500 Index ⁽²⁾	18.40%	13.95%
AlphaFactor® US Core Equity Index ⁽³⁾ (reflects no deductions for fees, expenses or taxes)	8.35%	8.09%

- (1) Inception date is October 1, 2018
- (2) The S&P 500 Index is a market-capitalization-weighted index of the 500 largest U.S. publicly traded companies. The S&P 500 Index is a float-weighted index, meaning company market capitalizations are adjusted by the number of shares available for public trading. Investors cannot invest directly in an index or benchmark. Index returns are gross of any fees, brokerage commissions or other expenses of investing.
- (3) The AlphaFactor® US Core Equity Index, the Fund advisor’s proprietary index, utilizes a quantitative rules-based investment methodology that applies a multi-factor ranking process and is focused on the largest 1,000 U.S. common stocks based on market capitalization. Companies within this group of the top 1,000 market capitalizations may be considered large or mid-cap companies. Investors cannot invest directly in an index or benchmark. Index returns are gross of any fees, brokerage commissions or other expenses of investing.

After-tax returns were calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns shown are not relevant to investors who hold shares of the Fund through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

Investment Adviser: Redwood Investment Management, LLC (the "Adviser") serves as investment adviser to the Fund.

Portfolio Managers: The Fund is jointly managed by Michael T. Messinger, Portfolio Manager and Principal of Redwood, Michael T. Cheung, Portfolio Manager and Senior Quantitative Analyst of Redwood, and Richard M. Duff, President of Redwood. Messrs. Messinger, Cheung and Duff have managed the Fund since it commenced operations in September, 2018.

Purchase and Sale of Fund Shares: The Fund will issue and redeem shares at NAV only in large blocks of 25,000 shares (each block of shares is called a "Creation Unit"). Creation Units are issued and redeemed for cash and/or in-kind for securities. Except when aggregated in Creation Units, the shares are not redeemable securities of the Fund.

Shares of the Fund are listed for trading on the New York Stock Exchange ("NYSE" or the "Exchange") and trade at market prices rather than NAV. Individual shares of the Fund may only be purchased and sold in secondary market transactions through a broker or dealer at market price. Because shares trade at market prices, rather than NAV, shares of the Fund may trade at a price that is greater than NAV (*i.e.*, at a premium), or less than NAV (*i.e.*, at a discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market (the "bid-ask spread").

Recent information, including information about the Fund's NAV, market price, premiums and discounts, and bid-ask spreads, is included on the Fund's website at www.leadershresetfs.com.

Tax Information: The Fund's distributions generally will be taxable at ordinary income or long-term capital gain rates. A sale of shares may result in capital gain or loss.

Payments to Broker-Dealers and Other Financial Intermediaries: If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Adviser and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

FUND SUMMARY – LEADERSHARES® EQUITY SKEW ETF

Investment Objective: The LeaderShares® Equity Skew ETF (the “Equity Skew ETF” or the “Fund”) seeks to generate long-term capital growth.

Fees and Expenses of the Fund: This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund. You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fee ⁽¹⁾	0.75%
Distribution (12b-1) and Service Fees	0.00%
Other Expenses	0.00%
Total Annual Fund Operating Expenses	0.75%

(1) The Fund’s adviser provides investment advisory service, and pays most of the Fund’s operating expenses (except all brokerage fees and commissions, taxes, borrowing costs (such as dividend expense on securities sold short and interest), fees and expenses of other investment companies in which the Fund may invest, or extraordinary expenses such as litigation) in return for a “unitary fee.”

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based upon these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$77	\$240	\$417	\$930

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund’s performance. For the fiscal period ended October 31, 2020 the Fund’s portfolio turnover rate was 57% of the average value of its portfolio.

Principal Investment Strategies: The Fund is an actively managed exchange traded fund (“ETF”) that normally invests at least 80% of its net assets, including any borrowings for investment purposes, in equity securities. The Fund defines equity securities to include investments in other investment companies, such as ETFs, that invest primarily in equity securities. The Fund employs a contrarian strategy seeking to buy underperforming asset classes and/or factors and sell outperforming asset classes and/or factors based on quantitative research. The primary equity style exposure and factors are large cap growth, large cap value, small cap growth, small cap value, and emerging market equities. The weightings to these equity style exposures represented by equity securities, are determined using proprietary quantitative methodologies that include statistical skew. Skew or skewness measures the asymmetry of a return distribution between different constituents in a group. Measuring the skewness allows the Adviser to take five groups of stocks (Large Cap Growth, Large Cap Value, Small Cap Growth, Small Cap Value and Emerging Markets) and determine the relative weightings of each of these five groups based on how recent returns of such group fits into its historical distribution of returns. This measure of skewness generally leads to security groups that have recently outperformed to have reduced exposure and security groups that have recently underperformed to have increased exposure at each re-balance. The Fund will invest in equity securities with a market capitalization of at least \$1 billion.

The Fund may have a higher degree of portfolio turnover than funds that seek to replicate the performance of an index. The Fund may engage in active and frequent trading.

Principal Investment Risks: As with all funds, there is the risk that you could lose money through your investment in the Fund. The Fund is not intended to be a complete investment program but rather one component of a diversified investment portfolio. An investment in the Fund is not guaranteed to achieve its investment objective; is not a deposit with a bank; is not insured, endorsed or guaranteed by the Federal Deposit Insurance Corporation or any other government agency; and is subject to investment risks. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. Many factors affect the Fund’s net asset value and performance. As with any fund, there is no guarantee that the Fund will achieve its goal. Each risk summarized below is a principal risk of investing in the Fund and different risks may be more significant at different times depending upon market conditions or other factors.

The Fund may be subject to the risks described below through its own direct investments and indirectly through its investments in other investment companies, such as ETFs.

- *Market Risk.* Overall market risk may affect the value of individual instruments in which the Fund invests. The Fund is subject to the risk that the securities markets will move down, sometimes rapidly and unpredictably, based on overall economic conditions and other factors, which may negatively affect the Fund's performance. Factors such as domestic and foreign (non-U.S.) economic growth and market conditions, real or perceived adverse economic or political conditions, inflation, changes in interest rate levels, lack of liquidity in the bond or other markets, volatility in the equities market or other securities markets or adverse investor sentiment and political events affect the securities markets. Securities markets also may experience long periods of decline in value. When the value of the Fund's investments goes down, your investment in the Fund decreases in value and you could lose money.

Local, state, regional, national or global events such as war, acts of terrorism, the spread of infectious illness or other public health issues, recessions, or other events could have a significant impact on the Fund and its investments and could result in decreases to the Fund's net asset value. Political, geopolitical, natural and other events, including war, terrorism, trade disputes, government shutdowns, market closures, natural and environmental disasters, epidemics, pandemics and other public health crises and related events and governments' reactions to such events have led, and in the future may lead, to economic uncertainty, decreased economic activity, increased market volatility and other disruptive effects on U.S. and global economies and markets. Such events may have significant adverse direct or indirect effects on the Fund and its investments. For example, a widespread health crisis such as a global pandemic could cause substantial market volatility, exchange trading suspensions and closures, impact the ability to complete redemptions, and affect Fund performance. A health crisis may exacerbate other pre-existing political, social and economic risks. In addition, the increasing interconnectedness of markets around the world may result in many markets being affected by events or conditions in a single country or region or events affecting a single or small number of issuers.

- *ETF Structure Risks.* The Fund is structured as an ETF and as a result is subject to special risks, including:
 - *Not Individually Redeemable.* Shares are not individually redeemable and may be redeemed by the Fund at NAV only in large blocks known as "Creation Units." You may incur brokerage costs purchasing enough shares to constitute a Creation Unit.
 - *Trading Issues.* Trading in shares on the New York Stock Exchange (the "NYSE") may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in shares inadvisable, such as extraordinary market volatility. There can be no assurance that shares will continue to meet the listing requirements of the Exchange. An active trading market for the Fund's shares may not be developed or maintained. If the Fund's shares are traded outside a collateralized settlement system, the number of financial institutions that can act as authorized participants that can post collateral on an agency basis is limited, which may limit the market for the Fund's shares.
 - *Market Price Variance Risk.* The market prices of shares will fluctuate in response to changes in NAV and supply and demand for shares and will include a "bid-ask spread" charged by the exchange specialists, market makers or other participants that trade the particular security. There may be times when the market price and the NAV vary significantly. This means that shares may trade at a discount to NAV. If a shareholder purchases shares at a time when the market price is at a premium to the NAV or sells shares at a time when the market price is at a discount to NAV, the shareholder may sustain losses if the shares are sold at a price that is less than the price paid by the shareholders for the shares.
 - In times of market stress, such as what was experienced during the COVID-19 pandemic, market makers may step away from their role market making in shares of ETFs and in executing trades, which can lead to differences between the market value of Fund shares and the Fund's net asset value.
 - The market price for the Fund's shares may deviate from the Fund's net asset value, particularly during times of market stress, with the result that investors may pay significantly more or significantly less for Fund shares than the Fund's net asset value, which is reflected in the bid and ask price for Fund shares or in the closing price.
 - When all or a portion of an ETFs underlying securities trade in a market that is closed when the market for the Fund's shares is open, there may be changes from the last quote of the closed market and the quote from the Fund's domestic trading day, which could lead to differences between the market value of the Fund's shares and the Fund's net asset value.
 - In stressed market conditions, the market for the Fund's shares may become less liquid in response to the deteriorating liquidity of the Fund's portfolio. This adverse effect on the liquidity of the Fund's shares may, in turn, lead to differences between the market value of the Fund's shares and the Fund's net asset value.

- *Equity Risk.* Equity securities are susceptible to general market fluctuations and volatile increases and decreases in value as market confidence in and perceptions of their issuers change. Factors that may influence the price of equity securities include developments affecting a specific company or industry, or the changing economic, political or market conditions.
- *Quantitative Investing Risk.* The Adviser may use proprietary computer trading modeling systems to implement its investment strategies for the Fund. Investments selected using these models may perform differently than the market as a whole or from their expected performance as a result of the factors used in the models, the weight placed on each factor, changes from the factors' historical trends and technical issues in the construction and implementation of the models. There is no assurance that the models are complete or accurate, or representative of future market cycles, nor will they necessarily be beneficial to the Fund if they are accurate. These systems may negatively affect Fund performance for various reasons, including human judgment, inaccuracy of historical data and non-quantitative factors (such as market or trading system dysfunctions, investor fear or over-reaction).
- *Authorized Participant Concentration Risk.* To the extent that authorized participants are unable or otherwise unavailable to proceed with creation and/or redemption orders and no other authorized participant is able to create or redeem in their place, shares may trade at a discount to net asset value ("NAV") and may face delisting.
- *Active Trading Risk.* A higher portfolio turnover due to active and frequent trading will result in higher transaction and brokerage costs associated with the turnover which may reduce the Fund's return, unless the securities traded can be bought and sold without corresponding commission costs. Active trading of securities may also increase the Fund's realized capital gains and losses, which may affect the taxes you pay as a Fund shareholder.
- *Cybersecurity Risk.* There is risk to the Fund of an unauthorized breach and access to fund assets, customer data (including private shareholder information), or proprietary information, or the risk of an incident occurring that causes the Fund, the investment adviser, custodian, transfer agent, distributor and other service providers and financial intermediaries to suffer data breaches, data corruption or lose operational functionality. Successful cyber-attacks or other cyber-failures or events affecting the Fund or its service providers may adversely impact the Fund or its shareholders.
- *Emerging Markets Risk.* Investing in emerging markets involves not only the risks described below with respect to investing in foreign securities, but also other risks, including exposure to economic structures that are generally less diverse and mature, and to political systems that can be expected to have less stability, than those of developed countries. The typically small size of the markets may also result in a lack of liquidity and in price volatility of these securities. Emerging markets are riskier than more developed markets because they tend to develop unevenly and may never fully develop. Investments in emerging markets may be considered speculative and share the risks of foreign developed markets but to a greater extent. Emerging markets are more likely to experience hyperinflation and currency devaluations, which adversely affect returns to U.S. investors. In addition, many emerging financial markets have far lower trading volumes and less liquidity than developed markets, which may result in increased price volatility of emerging market investments. The legal remedies for investors in emerging markets may be more limited than the remedies available in the U.S., and the ability of U.S. authorities (e.g., SEC and the U.S. Department of Justice) to bring actions against bad actors may be limited.
- *Fluctuation of Net Asset Value Risk.* Unlike conventional ETFs, the Fund is not an index fund. The Fund is actively managed and does not seek to replicate the performance of a specified index. The NAV of the Fund's shares will generally fluctuate with changes in the market value of the Fund's holdings. The market prices of the shares will generally fluctuate in accordance with changes in NAV as well as the relative supply of and demand for the shares on the Exchange. The Adviser cannot predict whether the shares will trade below, at or above their NAV. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for the shares will be closely related to, but not identical to, the same forces influencing the prices of the Fund's holdings trading individually or in the aggregate at any point in time. Actively managed ETFs have a limited trading history and, therefore, there can be no assurance as to whether and/or the extent to which the shares will trade at premiums or discounts to NAV.
- *Foreign (Non-U.S.) Investments Risk.* Foreign (non-U.S.) securities present greater investment risks than investing in the securities of U.S. issuers and may experience more rapid and extreme changes in value than the securities of U.S. companies, due to less information about foreign (non-U.S.) companies in the form of reports and ratings than about U.S. issuers; different accounting, auditing and financial reporting requirements; smaller markets; nationalization; expropriation or confiscatory taxation; currency blockage; or political changes or diplomatic developments. Foreign (non-U.S.) securities may also be less liquid and more difficult to value than securities of U.S. issuers.

- *Gap Risk.* The Fund is subject to the risk that a stock price or derivative value will change dramatically from one level to another with no trading in between and/or before the Fund can exit the investment. Usually such movements occur when there are adverse news announcements, which can cause a stock price or derivative value to drop substantially from the previous day's closing price. Trading halts may lead to gap risk.
- *Geographic and Sector Risk.* The risk that if the Fund invests a significant portion of its total assets in certain issuers within the same geographic region or economic sector, an economic, business or political development or natural or other event, including war, terrorism, natural and environmental disasters, epidemics, pandemics and other public health crisis adversely affecting that region or sector may affect the value of the Fund's investments more than if the Fund's investments were not so concentrated.
- *Investment Companies and ETFs Risk.* When the Fund invests in other investment companies, including ETFs, it will bear additional expenses based on its pro rata share of the other investment company's or ETF's operating expenses, including the management fees of the investment company or ETF in addition to those paid by the Fund. The risk of owning an investment company or ETF generally reflects the risks of owning the underlying investments the investment company or ETF holds. The Fund also will incur brokerage costs when it purchases and sells ETFs. The Fund may invest in inverse ETFs, which may result in increased volatility and will magnify the Fund's losses or gains. During periods of market volatility, inverse ETFs may not perform as expected.
- *Market Capitalization Risk.* The Fund's anticipated weighting towards larger-sized companies subjects the Fund to the risk that larger companies may not be able to attain the high growth rates of successful smaller companies, especially during strong economic periods, and that they may be less capable of responding quickly to competitive challenges and industry changes. Because the Fund may invest in companies of any size, its share price could be more volatile than a fund that invests only in large companies. Small and medium-sized companies typically have less experienced management, narrower product lines, more limited financial resources, and less publicly available information than larger companies. The earnings and prospects of small and medium sized companies are more volatile than larger companies and may experience higher failure rates than larger companies.
- *Market Events Risk.* There has been increased volatility, depressed valuations, decreased liquidity and heightened uncertainty in the financial markets during the past several years, including what was experienced in 2020. These conditions may continue, recur, worsen or spread. The U.S. government and the Federal Reserve, as well as certain foreign governments and central banks, have taken steps to support financial markets, including by keeping interest rates at historically low levels. This and other government intervention may not work as intended, particularly if the efforts are perceived by investors as being unlikely to achieve the desired results. The U.S. government and the Federal Reserve may reduce market support activities. Such reduction, including interest rate increases, could negatively affect financial markets generally, increase market volatility and reduce the value and liquidity of securities in which the Fund invests. Policy and legislative changes in the United States and in other countries may also continue to contribute to decreased liquidity and increased volatility in the financial markets. The impact of these changes on the markets, and the practical implications for market participants, may not be fully known for some time.
- *Management Risk.* The Fund's investment strategies may not result in an increase in the value of your investment or in overall performance equal to other similar investment vehicles having similar investment strategies. In addition, the Fund's tactical asset allocation strategy may be unsuccessful and may cause the Fund to miss attractive investment opportunities.
- *New Fund Risk.* The Fund is recently formed. Investors bear the risk that the Fund may not grow to or maintain economically viable size, may not be successful in implementing its investment strategy, and may not employ a successful investment strategy, any of which could result in the Fund being liquidated at any time without shareholder approval and/or at a time that may not be favorable for certain shareholders. Such a liquidation could have negative tax consequences for shareholders.

Performance: Because the Fund has only recently commenced investment operations, no performance information is presented for the Fund at this time. In the future, performance information will be presented in this section of this Prospectus. In addition, shareholder reports containing financial and performance information will be available to shareholders semi-annually. Updated performance information is available at no cost by visiting www.leadersharetfs.com or by calling (480) 757-4277.

Investment Adviser: Redwood Investment Management, LLC (the “Adviser”) serves as investment adviser to the Fund.

Portfolio Manager: The Fund is managed by a team comprised of Michael T. Messinger, Portfolio Manager and Principal of Redwood, Richard M. Duff, President of Redwood, and Michael T. Cheung, Portfolio Manager and Head of Quantitative Research. Mr. Messinger, Mr. Duff, and Mr. Cheung have managed the Fund since its inception in May 2020.

Purchase and Sale of Fund Shares: The Fund will issue and redeem shares at NAV only in large blocks of 25,000 shares (each block of shares is called a “Creation Unit”). Creation Units are issued and redeemed for cash and/or in-kind for securities. Except when aggregated in Creation Units, the shares are not redeemable securities of the Fund.

Shares of the Fund are listed for trading on the New York Stock Exchange (“NYSE”) (the “Exchange”) and trade at market prices rather than NAV. Individual shares of the Fund may only be purchased and sold in secondary market transactions through a broker or dealer at market price. Because shares trade at market prices, rather than NAV, shares of the Fund may trade at a price that is greater than NAV (*i.e.*, a premium), or less than NAV (*i.e.*, a discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market (the “bid-ask spread”).

Recent information, including information about the Fund’s NAV, market price, premiums and discounts, and bid-ask spreads, is included on the Fund’s website at www.leadersharetfs.com.

Tax Information: The Fund’s distributions generally will be taxable at ordinary income or long-term capital gain rates. A sale of shares may result in capital gain or loss.

Payments to Broker-Dealers and Other Financial Intermediaries: If you purchase shares of the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies, including the Adviser, may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.

ADDITIONAL INFORMATION ABOUT INVESTMENT OBJECTIVES, PRINCIPAL INVESTMENT STRATEGIES AND RELATED RISKS

This section provides more detailed information about the investment objectives, principal investment strategies and certain risks of investing in each of the LeaderShares® Activist Leaders® ETF (the “Activist Leaders ETF”), the LeaderShares® AlphaFactor® Tactical Focused ETF (the “Tactical ETF”), the LeaderShares® AlphaFactor® US Core Equity ETF (the “US Core Equity ETF”), and the LeaderShares® Equity Skew ETF (the “Equity Skew ETF”). The Activist Leaders ETF, the Tactical ETF, the US Core Equity ETF and the Equity Skew ETF are each referred to as a “Fund” and are collectively referred to as (the “Funds”). This section also provides information regarding the Funds’ disclosure of portfolio holdings.

LeaderShares® Activist Leaders® ETF

Investment Objective: The LeaderShares® Activist Leaders® ETF seeks to generate long-term capital growth.

The Fund’s investment objective may be changed by the Board of Trustees upon 60 days’ written notice to shareholders.

Principal Investment Strategies: The Fund is an actively managed exchange-traded fund (“ETF”) that employs an investment approach that focuses on equity securities that are the target of shareholder activism. These equity securities are identified using a proprietary quantitative methodology built on the foundation of tracking legally mandated filings known as “13D” filings that are submitted with the Securities and Exchange Commission (“SEC”). Rules adopted under the Securities Exchange Act of 1934 require a shareholder that acquires, with an activist intent, more than 5% of a company’s shares to file a form with the SEC known as a Schedule 13D that discloses the investor’s identity and the investor’s purpose in acquiring those shares.

The Fund’s Adviser identifies Activist Leader® investors utilizing a proprietary methodology based upon qualitative elements, including research into the effectiveness of activist investors’ achievement of stated objectives and creation of positive shareholder returns in positions that were the subject of a 13D filing by them. Because the Adviser’s identification of Activist Leaders® investors is based on ongoing research, the list of Activist Leaders® investors may change over time.

The Fund will be invested in equity securities of companies listed on a U.S. exchange with market capitalizations of at least \$1 billion at the time of initial purchase. The Fund may focus its investments in a particular sector, industry or group of industries. The Fund may utilize derivatives, such as equity options and total return swap agreements, to seek to achieve its objective and for hedging purposes.

The Fund may engage in active and frequent trading.

LeaderShares® AlphaFactor® Tactical Focused ETF

Investment Objective: The LeaderShares® AlphaFactor® Tactical Focused ETF seeks to generate long-term capital growth.

The Fund’s investment objective may be changed by the Board of Trustees upon 60 days’ written notice to shareholders.

Principal Investment Strategies: The Fund is an actively managed exchange-traded fund (“ETF”) that employs an investment approach that utilizes a quantitative factor-based investment methodology focused on U.S. equities. The Adviser selects stocks based on a number of characteristics that include, but are not limited to, net share count reduction, free cash flow growth, dividend yield, volatility and debt/asset ratios. The final selection of stocks is based on market characteristics including, but not limited to, liquidity and market capitalization. The Fund expects the average daily trading volume of shares in companies being selected to be in excess of 400,000 shares per day at the time of purchase, however average daily trading volume may change due to market fluctuations. In addition, the Fund expects the market capitalization of the companies in which it invests to be \$1 billion and greater, however this could change due to market fluctuations. The Fund will typically be invested in a diversified portfolio of equity securities or investments that are economically tied to equity securities (*i.e.*, derivatives) such as equity options, of companies with market capitalizations of at least \$1 billion at the time of initial purchase. The Adviser employs a multi-factor tactical risk management overlay that seeks to identify periods of above average risk. **At times identified by the Adviser as above average risk, the Fund may exit positions in equity securities and become comprised primarily of money market instruments such as treasury bills, certificates of deposit and commercial paper and other short-term instruments, money market funds, or U.S. government bonds.** Such investments can either be direct or through investments in other investment companies, including exchange-traded funds (“ETFs”). In identifying a time as above average risk, the Fund will consider multiple factors including negative market performance and negative market technical indicators such as advance versus decline breadth, as well as a proprietary set of supply and demand and economic factors.

Temporary Defensive Position: In response to adverse market, economic, political or other conditions, the Tactical ETF may temporarily invest up to 100% of its total assets, without limitation, in high-quality short-term debt securities, money market instruments and cash. These short-term debt securities and money market instruments include: shares of money market mutual funds, commercial paper, certificates of deposit, bankers' acceptances, U.S. Government securities and repurchase agreements. While such Fund is in a temporary defensive position, the opportunity to achieve upside return may be limited; however, the ability to be fully defensive is an integral part of achieving the Fund's investment objective.

The Fund may focus its investments in a particular sector, industry or group of industries. The Fund may utilize derivatives, such as equity options and total return swap agreements, to seek to achieve its objective and for hedging purposes.

The Fund may engage in active and frequent trading.

LeaderShares®AlphaFactor® US Core Equity ETF

Investment Objective: LeaderShares®AlphaFactor® US Core Equity ETF (the "Fund") seeks to provide investment results that correspond generally, before fees and expenses, to the performance of the AlphaFactor® US Core Equity Index (the "Index").

The Fund's investment objective or underlying index may be changed by the Board of Trustees upon 60 days' written notice to shareholders. If the Calculation Agent no longer calculates the underlying index of the Fund, if the underlying index is terminated for any reason, if the identity or the character of the underlying index is materially changed, or for any other reason determined by the Board of Trustees in good faith, that it is impracticable to substitute a replacement index, it will take whatever action is deemed to be in the best interests of the Fund's shareholders.

Under normal circumstances, at least 80% of the Fund's net assets, including any borrowings for investment purposes, will be invested in a diversified portfolio of equity securities of U.S. common stocks included in the Index. The Fund may also invest up to 20% of its assets in certain equity options, index options, swap contracts or other derivatives, as related to its Index, as well as in securities and other instruments not included in its Index but which the Adviser believes will help the Fund track its Index. The Adviser anticipates that, generally, the Fund will hold all of the securities that compose the Index in proportion to their weightings in the Index. However, under various circumstances, it may not be possible or practicable to purchase all of those securities in those weightings. In these circumstances, the Fund may purchase a sample of securities in the Index. There also may be instances in which the Adviser may choose to purchase securities not in the Index that the Adviser believes are appropriate to substitute for certain securities in the Index, or utilize various combinations of other available investment techniques. The Fund may sell securities that are represented in the Index in anticipation of their removal from the Index or purchase securities not represented in the Index in anticipation of their addition to the Index. The Fund may also, in order to comply with the tax diversification requirements of the Internal Revenue Code of 1986, as amended, temporarily invest in securities not included in the Index that are expected to be correlated with the securities included in the Index. Given the Fund's investment strategy of tracking the Index, the Fund does not follow traditional methods of active investment management, which may involve buying and selling securities based upon analysis of economic and market factors.

Principal Investment Strategies: The Fund seeks to replicate the Adviser's proprietary index, the AlphaFactor® US Core Equity Index. The Index utilizes a quantitative rules-based investment methodology that applies a multi-factor ranking process and is focused on the largest 1,000 U.S. common stocks based on market capitalization. Companies within this group of top 1,000 market capitalization may be considered large or mid-cap companies. As of January 31, 2021, the market capitalization range of this universe of companies is between \$5.6 billion and over \$2.0 trillion. Due to future market fluctuations, the market capitalization of this universe may be lower or higher at any given time. The methodology selects stocks based on a number of characteristics that include, but are not limited to, net share count reduction, free cash flow growth, and debt/asset ratios. The final selection of stocks is based on market characteristics including, but not limited to, liquidity and market capitalization.

Under normal circumstances, at least 80% of the Fund's net assets, including any borrowings for investment purposes, will be invested in a diversified portfolio of equity securities of U.S. common stocks included in the Index. The Fund may also invest up to 20% of its assets in certain equity options, index options, swap contracts or other derivatives, as related to its Index, as well as in securities and other instruments not included in its Index but which the Adviser believes will help the Fund track its Index. Federal law generally requires the Fund to segregate or " earmark " liquid assets or otherwise cover the marked-to-market exposure of its derivatives.

As of December 31, 2020, the Index was comprised of one hundred issuers. It is rebalanced to equal weight and reconstituted on a quarterly basis. The composition of the Index will change over time.

The Fund will use as its index calculation agent Solactive AG ("Calculation Agent"), an organization that is independent of the Fund and the Adviser. The Adviser determines the composition and relative weightings of the securities in the Index and the Calculation Agent publishes information regarding the market value of the Index.

The Fund uses a “passive” or indexing approach to attempt to approximate the investment performance of the Index by investing in a portfolio of securities that generally replicates the Index. Unlike many investment companies, the Fund does not try to “beat” the index it tracks and does not seek temporary defensive positions when markets decline or appear overvalued. The Fund may concentrate its investments in certain sectors, which may include the information technology sector, industrials sector, consumer discretionary sector, and financials sector, to the extent that the Index concentrates in such sectors.

LeaderShares® Equity Skew ETF

Investment Objective: The Fund seeks to generate long-term capital growth.

Principal Investment Strategies: The Fund is an actively managed exchange traded fund (“ETF”) that normally invests at least 80% of its net assets, including any borrowings for investment purposes, in equity securities. The Fund defines equity securities to include investments in other investment companies, such as ETFs, that invest primarily in equity securities. The Fund employs a contrarian strategy seeking to buy underperforming asset classes and/or factors and sell outperforming asset classes and/or factors based on quantitative research. The primary equity style exposure and factors are large cap growth, large cap value, small cap growth, small cap value, and emerging market equities. The weightings to these equity style exposures represented by equity securities, are determined using proprietary quantitative methodologies that include statistical skew. Skew or skewness measures the asymmetry of a return distribution between different constituents in a group. Measuring the skewness allows the Adviser to take five groups of stocks (Large Cap Growth, Large Cap Value, Small Cap Growth, Small Cap Value and Emerging Markets) and determine the relative weightings of each of these five groups based on how recent returns of such group fits into its historical distribution of returns. This measure of skewness generally leads to security groups that have recently outperformed to have reduced exposure and security groups that have recently underperformed to have increased exposure at each re-balance. The Fund will invest in equity securities with a market capitalization of at least \$1 billion.

The Fund may engage in active and frequent trading. The Fund may also engage in securities lending to generate income.

Principal And Other Risk Factors

As with all funds, there is the risk that you could lose money through your investment in the Funds. An investment in a Fund is not guaranteed to achieve its investment objective; is not a deposit with a bank; is not insured, endorsed or guaranteed by the Federal Deposit Insurance Corporation or any other government agency; and is subject to investment risks. The Adviser cannot guarantee that a Fund will achieve its objectives. The value of your investment in a Fund, as well as the amount of return you receive on your investment, may fluctuate significantly. You may lose part or all of your investment in a Fund or your investment may not perform as well as other similar investments. A Fund is not intended to be a complete investment program but rather one component of a diversified investment portfolio. Many factors affect a Fund’s net asset value and performance. It is important that investors closely review and understand these risks before making an investment in a Fund. Additional information regarding the principal and certain other risks of investing in the Funds is provided below. The Funds’ Statement of Additional Information (“SAI”), which is incorporated by reference into this Prospectus, includes more information about the Funds and their investments and risks. The risks described in this Prospectus (and in the SAI) are not intended to include every potential risk of investing in the Funds. The Funds could be subject to additional risks because the types of investments it makes may change over time. The following section provides additional information regarding certain of the principal risks identified under “Principal Risk Factors” in the Fund’s summary along with additional risk information. The table below provides additional information regarding the risks of investing in the Funds. Following the table, each risk is explained.

The Equity Skew ETF may invest in securities of other investment companies, including ETFs. The Equity Skew ETF may be subject to the risks of the securities and other instruments described below through its own direct investments and indirectly through investments in other investment companies, including ETFs. In addition, each of the Activist Leaders ETF, the Tactical ETF, and the US Core Equity ETF, may also be subject to the risks of the securities and other instruments described below through its own direct investments and, to the extent such funds invest in other investment companies, indirectly through such investments.

Activist Risk

An activist investor uses an equity stake in a company to put public pressure on the company's management team and board in order to achieve certain objectives such as the increase of shareholder value through changes in corporate policy or financing structure, or to reduce expenses. Shareholder activism can take any of several forms, including proxy battles, publicity campaigns, and negotiations with management. Although the Fund does not intend to invest in companies for the purpose of effecting change or influencing or controlling management itself, the Fund invests in companies that the Adviser believes have potential for capital appreciation resulting from such changes. The Adviser's evaluation of companies may prove incorrect, or the efforts which they invest may not be successful, or even if successful, may have unintended affects or cause the Fund's investment to lose value.

Active Trading Risk

A higher portfolio turnover may result in higher transactional and brokerage costs associated with the turnover which may reduce the Fund's return, unless the securities traded can be bought and sold without corresponding commission costs. Active trading of securities may also increase the Fund's realized capital gains or losses, which may affect the taxes you pay as a Fund shareholder.

Authorized Participant Concentration Risk

To the extent that authorized participants are unable or otherwise unavailable to proceed with creation and/or redemption orders and no other authorized participant is able to create or redeem in their place, shares may trade at a discount to NAV and may face delisting.

Calculation Methodology Risk

The Index relies on various sources of information to assess the criteria of issuers included in the Index, including information that may be based on assumptions and estimates. Neither the Fund, the Adviser, nor Solactive, AG can offer assurances that the Index's calculation methodology or sources of information will provide an accurate assessment of included issuers or correct valuation of securities, nor can they guarantee the availability or timeliness of the production of the Index.

Cash Positions Risk

The Fund may hold a significant position in cash and/or cash equivalent securities. When the Fund's investment in cash or cash equivalent securities increases, the Fund may not participate in market advances or declines to the same extent that it would if the Fund were more fully invested.

Cybersecurity Risk

There is risk to the Fund of an unauthorized breach and access to fund assets, customer data (including private shareholder information), or proprietary information, or the risk of an incident occurring that causes the Fund, the investment advisor, administrator, custodian, transfer agent, distributor and other service providers and financial intermediaries (collectively "Service Providers") to suffer data breaches, data corruption or lose operational functionality. Successful cyber-attacks or other cyber-failures or events affecting the Fund, or its Service Providers may adversely impact the Fund or its shareholders. Because information technology ("IT") systems and digital data underlie most of the Fund's operations, the Fund and its Service Providers are exposed to the risk that their operations and data may be compromised as a result of internal and external cyber-failures, breaches or attacks ("Cyber Risk"). This could occur as a result of malicious or criminal cyber-attacks. Cyber-attacks include actions taken to: (i) steal or corrupt data maintained online or digitally, (ii) gain unauthorized access to or release confidential information, (iii) shut down the Fund or Service Provider website through denial-of-service attacks, or (iv) otherwise disrupt normal business operations. Events arising from human error, faulty or inadequately implemented policies and procedures or other systems failures unrelated to any external cyber-threat may have effects similar to those caused by deliberate cyber-attacks. See "Cybersecurity" below for additional risks related to potential cybersecurity breaches.

Derivatives Risk

The Fund may invest in derivatives, which are financial instruments whose value is typically based on the value of a security, index or other instrument. These instruments include futures, options, credit default swaps, total return swaps, repurchase agreements and other similar instruments and may be subject to unanticipated market movements, which are potentially unlimited. Derivatives may also include customized baskets or options (which may incorporate other securities directly and also various derivatives including common stock, options, and futures) structured as agreed upon by a counterparty, as well as specially structured types of mortgage- and asset-backed securities whose value is often linked to commercial and residential mortgage portfolios. The Fund's use of derivative instruments involves risks different from, and possibly greater than, the risks associated with investing directly in securities and other more traditional investments, and certain derivatives may create a risk of loss greater than the amount invested.

Investing for hedging purposes or to increase the Fund's return may result in certain additional transaction costs that may reduce the Fund's performance. When used for hedging purposes, no assurance can be given that each derivative position will achieve a perfect correlation with the investment against which it is being hedged. Because the markets for certain derivative instruments are relatively new, suitable derivatives transactions may not be available in all circumstances for risk management or other purposes and there can be no assurance that a particular derivative position will be available when sought by the Adviser or that such techniques will be utilized by the Adviser.

The market value of derivative instruments and securities may be more volatile than that of other instruments, and each type of derivative instrument may have its own special risks, including the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates, and indices. Many derivatives, in particular privately negotiated derivatives, are complex and often valued subjectively. Improper valuations can result in increased cash payment requirements to counterparties or a loss of value to the Fund. The value of derivatives may not correlate perfectly, or at all, with the value of the assets, reference rates or indices they are designed to closely track.

Derivatives are subject to a number of other risks, including liquidity risk (the possibility that the derivative may be difficult to purchase or sell and the Adviser may be unable to initiate a transaction or liquidate a position at an advantageous time or price), leverage risk (the possibility that adverse changes in the value or level of the underlying asset, reference rate or index can result in loss of an amount substantially greater than the amount invested in the derivative), interest rate risk (some derivatives are more sensitive to interest rate changes and market price fluctuations), and counterparty risk (the risk that a counterparty may be unable to perform according to a contract, and that any deterioration in a counterparty's creditworthiness could adversely affect the instrument). In addition, because derivative products are highly specialized, investment techniques and risk analyses employed with respect to investments in derivatives are different from those associated with stocks and bonds. Finally, the Fund's use of derivatives may cause the Fund to realize higher amounts of short-term capital gains (generally taxed at ordinary income tax rates) than if the Fund had not used such instruments. Derivative instruments are also subject to the risk that the market value of an instrument will change to the detriment of the Fund. If the Adviser inaccurately forecast the values of securities, currencies or interest rates or other economic factors in using derivatives, the Fund might have been in a better position if it had not entered into the transaction at all. Some strategies involving derivative instruments can reduce the risk of loss, but they can also reduce the opportunity for gain or result in losses by offsetting favorable price movements in other investments held by the Fund. The Fund may also have to buy or sell a security at a disadvantageous time or price because regulations require funds to maintain offsetting positions or asset coverage in connection with certain derivatives transactions.

The Fund's SAI provides a more detailed description of the types of derivative instruments in which the Fund may invest and their associated risks.

Emerging Markets Risk

To the extent the Fund invests in emerging market securities, the risks associated with foreign (non-U.S.) investment risk may be particularly high. The Fund's investments in emerging market countries are subject to all of the risks of foreign investing generally, and have additional heightened risks due to a lack of established legal, political, business and social frameworks to support securities markets. These risks include less social, political and economic stability; smaller securities markets with low or nonexistent trading volume and greater illiquidity and price volatility; more restrictive national policies on foreign investment, including restrictions on investment in issuers or industries deemed sensitive to national interests; less transparent and established taxation policies; less developed regulatory or legal structures governing private and foreign investment; more pervasiveness of corruption and crime; less financial sophistication, creditworthiness and/or resources possessed by, and less government regulation of, the financial institutions and issuers with which the Fund transacts; less government supervision and regulation of business and industry practices, stock exchanges, brokers and listed companies than in the U.S.; greater concentration in a few industries resulting in greater vulnerability to regional and global trade conditions; higher rates of inflation and more rapid and extreme fluctuations in inflation rates; greater sensitivity to interest rate changes; increased volatility in currency exchange rates and potential for currency devaluations and/or currency controls; greater debt burdens relative to the size of the economy; more delays in settling portfolio transactions and heightened risk of loss from share registration and custody practices; and less assurance that recent favorable economic developments will not be slowed or reversed by unanticipated economic, political or social events in such countries. Because of these risk factors, the Fund's investments in developing market countries are subject to greater price volatility and illiquidity than investments in developed markets. Governments of emerging market countries may own or control parts of the private sector. Accordingly, government actions could have a significant impact on economic conditions. Certain emerging market countries require governmental approval prior to investments by foreign persons, limit the amount of investment by foreign persons in a particular sector and/or company, limit the investment by foreign persons to a specific class of securities of an issuer that may have less advantageous rights than a domestically available class, require foreign investors to maintain a trading account with only one licensed securities company in the relevant market and/or impose additional taxes on foreign investors. These may contribute to the illiquidity of the relevant securities market, as well as create inflexibility and uncertainty as to the trading environment. The legal remedies for investors in emerging markets may be more limited than the remedies available in the U.S., and the ability of U.S. authorities (e.g., SEC and the U.S. Department of Justice) to bring actions against bad actors may be limited.

Equity Risk

Equity securities are susceptible to general market fluctuations and volatile increases and decreases in value as market confidence in and perceptions of their issuers change. Factors that may influence the price of equity securities include developments affecting a specific company or industry, or the changing economic, political or market conditions.

ETF Structure Risk

The Fund is structured as an ETF and as a result is subject to the special risks, including:

Not Individually Redeemable. Shares are not individually redeemable and may be redeemed by the Fund at NAV only in large blocks known as “Creation Units.” You may incur brokerage costs purchasing enough shares to constitute a Creation Unit.

Trading Issues. Trading in shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in shares inadvisable, such as extraordinary market volatility. There can be no assurance that shares will continue to meet the listing requirements of the Exchange. An active trading market for the Fund’s shares may not be developed or maintained. If the Fund’s shares are traded outside a collateralized settlement system, the number of financial institutions that can act as authorized participants that can post collateral on an agency basis is limited, which may limit the market for the Fund’s shares.

Market Price Variance Risk. The market prices of shares will fluctuate in response to changes in NAV and supply and demand for shares and will include a “bid-ask spread” charged by the exchange specialists, market makers or other participants that trade the particular security. There may be times when the market price and the NAV vary significantly and you may pay more than NAV when buying shares on the secondary market, and you may receive less than NAV when you sell those shares. This means shares may trade at a discount or premium to NAV. If a shareholder purchases shares at a time when the market price is at a premium to the NAV or sells shares at a time when the market price is at a discount to NAV, the shareholder may sustain losses if the shares are sold at a price that is less than the price paid by the shareholder for the shares. In times of market stress, such as what was experienced during the COVID-19 pandemic, market makers may step away from their role market making in shares of ETFs and in executing trades, which can lead to differences between the market value of Fund shares and the Fund’s net asset value. The market price for the Fund’s shares may deviate from the Fund’s net asset value, particularly during times of market stress, with the result that investors may pay significantly more or significantly less for Fund shares than the Fund’s net asset value, which is reflected in the bid and ask price for Fund shares or in the closing price. When all or a portion of an ETF’s underlying securities trade in a market that is closed when the market for the Fund’s shares is open, there may be changes from the last quote of the closed market and the quote from the Fund’s domestic trading day, which could lead to differences between the market value of the Fund’s shares and the Fund’s net asset value. In stressed market conditions, the market for the Fund’s shares may become less liquid in response to the deteriorating liquidity of the Fund’s portfolio. This adverse effect on the liquidity of the Fund’s shares may, in turn, lead to differences between the market value of the Fund’s shares and the Fund’s net asset value.

Fluctuation of Net Asset Value Risk

The NAV of a Fund’s shares will generally fluctuate with changes in the market value of the Fund’s holdings. The market prices of the shares will generally fluctuate in accordance with changes in NAV as well as the relative supply of and demand for the shares on the Exchange. The Adviser cannot predict whether the shares will trade below, at or above their NAV. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for the shares will be closely related to, but not identical to, the same forces influencing the prices of a Fund’s holdings trading individually or in the aggregate at any point in time. In addition, unlike conventional ETFs, each of the Activist Leaders ETF, the Tactical ETF and the Equity Skew ETF is not an index fund. Such Funds are actively managed and do not seek to replicate the performance of a specified index. Actively managed ETFs have a limited trading history and, therefore, there can be no assurance as to whether and/or the extent to which the shares will trade at premiums or discounts to NAV.

Focus Risk

To the extent that a Fund invests a greater proportion of its assets in the securities of a smaller number of issuers, the Fund may be subject to greater volatility with respect to its investments than a fund that invests in a larger number of securities.

Foreign (Non-U.S.) Investments Risk

Foreign (non-U.S.) securities present greater investment risks than investing in the securities of U.S. issuers and may experience more rapid and extreme changes in value than the securities of U.S. companies, due to less information about foreign (non-U.S.) companies in the form of reports and ratings than about U.S. issuers; different accounting, auditing and financial reporting requirements; smaller markets; nationalization; expropriation or confiscatory taxation; currency blockage; or political, financial, social and economic events (including, for example, military confrontations, war and terrorism) or diplomatic developments. To the extent that the Fund invests a significant portion of its assets in a specific geographic region, the Fund will generally have more exposure to regional economic risks associated with foreign investments. Foreign (non-U.S.) securities may also be less liquid and more difficult to value than securities of U.S. issuers. In addition, foreign markets may have greater volatility than domestic markets and foreign securities may be less liquid and harder to value than domestic securities. Certain foreign markets may rely heavily on particular industries or foreign capital and are more vulnerable to diplomatic developments, the imposition of economic sanctions against a particular country or countries, organizations, entities and/or individuals, changes in international trading patterns, trade barriers, and other protectionist or retaliatory measures. International trade barriers or economic sanctions against foreign countries, organizations, entities and/or individuals may adversely affect the Fund’s foreign holdings or exposures.

Foreign securities involve special risks and costs, which are considered by the investment adviser in evaluating the creditworthiness of issuers and making investment decisions for the Fund. Foreign securities fluctuate in price because of political, financial, social and economic events in foreign countries (including, for example, military confrontations, war and terrorism). A foreign security could also lose value because of more or less stringent foreign securities regulations and less stringent accounting and disclosure standards. In addition, foreign markets may have greater volatility than domestic markets and foreign securities may be less liquid and harder to value than domestic securities.

Foreign securities, and in particular foreign debt securities, are sensitive to changes in interest rates. In addition, investment in the securities of foreign governments involves the risk that foreign governments may default on their obligations or may otherwise not respect the integrity of their obligations. The performance of investments in securities denominated in a foreign currency also will depend, in part, on the strength of the foreign currency against the U.S. dollar and the interest rate environment in the country issuing the currency. Absent other events which otherwise could affect the value of a foreign security (such as a change in the political climate or an issuer's credit quality), appreciation in the value of the foreign currency generally results in an increase in value of a foreign currency-denominated security in terms of U.S. dollars. A decline in the value of the foreign currency relative to the U.S. dollar generally results in a decrease in value of a foreign currency-denominated security. Additionally, many countries throughout the world are dependent on a healthy U.S. economy and are adversely affected when the U.S. economy weakens or its markets decline.

Investment in foreign securities may involve higher costs than investment in U.S. securities, including higher transaction and custody costs as well as the imposition of additional taxes by foreign governments. Foreign investments also may involve risks associated with the level of currency exchange rates, less complete financial information about the issuers, less market liquidity, more market volatility and political instability. Future political and economic developments, the possible imposition of withholding taxes on dividend income, the possible seizure or nationalization of foreign holdings, the possible establishment of exchange controls or freezes on the convertibility of currency, trade restrictions (including tariffs) or the adoption of other governmental restrictions might adversely affect an investment in foreign securities. Additionally, foreign banks and foreign branches of domestic banks may be subject to less stringent reserve requirements and to different accounting, auditing and recordkeeping requirements.

While a Fund's investments may, if permitted, be denominated in foreign currencies, the portfolio securities and other assets held by the Fund or underlying funds are valued in U.S. dollars. Price fluctuations may occur in the dollar value of foreign securities because of changing currency exchange rates or, in the case of hedged positions, because the U.S. dollar declines in value relative to the currency hedged. Currency exchange rates may fluctuate significantly over short periods of time causing a Fund's or Underlying Fund's NAV to fluctuate as well. Currency exchange rates can be affected unpredictably by the intervention or the failure to intervene by U.S. or foreign governments or central banks, or by currency controls or political developments in the United States or abroad. To the extent that a Fund or Underlying Fund is invested in foreign securities while also maintaining currency positions, it may be exposed to greater combined risk. The net currency positions of the Funds or underlying funds may expose them to risks independent of their securities positions.

The Fund may operate in euros and/or may hold euros and/or euro-denominated bonds and other obligations. The euro requires participation of multiple sovereign states forming the Euro zone and is therefore sensitive to the credit and general economic and political positions of each such state, including, each state's actual and intended ongoing engagement with and/or support for the other sovereign states then forming the European Union ("EU"), in particular those within the Euro zone. Changes in these factors might materially and adversely impact the value of securities in which a Fund or Underlying Fund has invested.

In addition, voters in the United Kingdom ("UK") approved withdrawal from the EU and the UK withdrew from the EU on January 31, 2020. Securities issued by companies domiciled in the UK could be subject to changing regulatory and tax regimes. Banking and financial services companies that operate in the UK or EU could be disproportionately impacted by those actions. Other countries may seek to withdraw from the EU and/or abandon the euro, the common currency of the EU, which could exacerbate market and currency volatility and negatively impact the Funds' investments in securities issued by companies located in EU countries. A number of countries in Europe have suffered terror attacks, and additional attacks may occur in the future. Ukraine has experienced ongoing military conflict; this conflict may expand and military attacks could occur in Europe. Europe has also been struggling with mass migration from the Middle East and Africa. Recent and upcoming European elections could, depending on the outcomes, further call into question the future direction of the EU. The ultimate effects of these events and other socio-political or geopolitical issues are not known but could profoundly affect global economies and markets. The impact of these actions, especially if they occur in a disorderly fashion, is not clear, but could be significant and far-reaching. Whether or not a Fund invests in securities of issuers located in Europe or with significant exposure to European issuers or countries, these events could negatively affect the value and liquidity of a Fund's investments.

Gap Risk

The Fund is subject to the risk that a stock price or derivative value will change dramatically from one level to another with no trading in between and/or before the Fund can exit the investment. Usually such movements occur when there are adverse news announcements, which can cause a stock price or derivative value to drop substantially from the previous day's closing price. For example, the price of a stock can drop from its closing price one night to its opening price the next morning. The difference between the two prices is the gap. Trading halts may lead to gap risk.

Geographic and Sector Risk

The risk that if the Fund invests a significant portion of its total assets in certain issuers within the same geographic region or economic sector, an adverse economic, business or political development or natural or other event, including war, terrorism, natural and environmental disasters, epidemics, pandemics and other public health issue crisis, affecting that region or sector may affect the value of the Fund's investments more than if the Fund's investments were not so focused. While the Fund may not concentrate in any one industry, the Fund may invest without limitation in a particular country or sector.

Index Tracking Error Risk

As with all index funds, the performance of the Fund and the Index may differ from each other for a variety of reasons. For example, the Fund incurs operating expenses and portfolio transaction costs not incurred by the Index. In addition, the Fund may not be fully invested in the securities of the Index at all times, may deviate from the relative weightings of the Index or may hold securities not included in the Index. Tracking error risk may be heightened during times of market volatility or other unusual market conditions.

Industry Concentration Risk

The Fund may be susceptible to an increased risk of loss, including losses due to adverse events that affect the Fund's investments more than the market as a whole, to the extent that the Fund's investments are concentrated in a particular industry, group of industries or sector.

Investment Companies and ETFs Risk

When the Fund invests in other investment companies, including ETFs, it will bear additional expenses based on its pro rata share of the other investment company's or ETF's operating expenses, including the management fees of the investment company or ETF in addition to those paid by the Fund. The risk of owning an investment company or ETF generally reflects the risks of owning the underlying investments the investment company or ETF holds. The Fund also will incur brokerage costs when it purchases and sells ETFs. The Fund may invest in inverse ETFs, which may result in increased volatility and will magnify the Fund's losses or gains. During periods of market volatility, inverse ETFs may not perform as expected.

Management Risk

The Funds' investment strategies may not result in an increase in the value of your investment in a Fund or in overall performance equal to other similar investment vehicles having similar investment strategies to those of a Fund. The net asset value of the Fund changes daily based on the performance of the securities and derivatives in which it invests. The Adviser's judgments about the attractiveness, value and potential appreciation of particular securities and derivatives in which the Fund invests may prove to be incorrect and may not produce the desired results. Additionally, the Adviser may have conflicts of interest that could interfere with its management of the Fund's portfolio. For example, the Adviser or its affiliates may manage other investment funds or have other clients that may be similar to, or overlap with, the investment objective and strategy of the Fund, creating potential conflicts of interest when making decisions regarding which investments may be appropriate for the Fund and other clients. Further information regarding conflicts of interest is available in the SAI.

Market Capitalization Risk

The Fund's anticipated weighting towards larger-sized companies subjects the Fund to the risk that larger companies may not be able to attain the high growth rates of successful smaller companies, especially during strong economic periods, and that they may be less capable of responding quickly to competitive challenges and industry changes. Because the Fund may invest in companies of any size, its share price could be more volatile than a Fund that invests only in large companies. Small and medium-sized companies typically have less experienced management, narrower product lines, more limited financial resources, and less publicly available information than larger companies. The earnings and prospects of small and medium sized companies are more volatile than larger companies and may experience higher failure rates than larger companies. Medium sized companies normally have a lower trading volume than larger companies, which may tend to make their market price fall more disproportionately than larger companies in response to selling pressures.

Market Events Risk

There has been increased volatility, depressed valuations, decreased liquidity and heightened uncertainty in the financial markets during the past several years, including what was experienced in 2020. These conditions are an inevitable part of investing in capital markets and may continue, recur, worsen or spread. The U.S. government and the Federal Reserve, as well as certain foreign governments and central banks, have taken steps to support financial markets, including by keeping interest rates at historically low levels. This and other government intervention may not work as intended, particularly if the efforts are perceived by investors as being unlikely to achieve the desired results. The U.S. government and the Federal Reserve may reduce market support activities. Such reduction, including interest rate increases, could negatively affect financial markets generally, increase market volatility and reduce the value and liquidity of securities in which the Fund invests. Policy and legislative changes in the United States and in other countries may also continue to contribute to decreased liquidity and increased volatility in the financial markets. The impact of these changes on the markets, and the practical implications for market participants, may not be fully known for some time. COVID-19 has resulted in travel restrictions, closed international borders, enhanced health screenings at ports of entry and elsewhere, disruption of and delays in healthcare service preparation and delivery, prolonged quarantines, cancellations, business and school closings, supply chain disruptions, and lower consumer demand, as well as general concern and uncertainty. The impact of COVID-19, and other infectious illness outbreaks that may arise in the future, could adversely affect the economies of many nations or the entire global economy, individual issuers and capital markets in ways that cannot necessarily be foreseen.

Market Risk

Overall market risk may affect the value of individual instruments in which the Fund invests. The Fund is subject to the risk that the securities markets will move down, sometimes rapidly and unpredictably, based on overall economic conditions and other factors, which may negatively affect the Fund's performance. Factors such as domestic and foreign (non-U.S.) economic growth and market conditions, real or perceived adverse economic or political conditions, inflation, changes in interest rate levels, lack of liquidity in the markets, volatility in the securities markets, adverse investor sentiment affect the securities markets and political events affect the securities markets. Securities markets also may experience long periods of decline in value. When the value of the Fund's investments goes down, your investment in the Fund decreases in value and you could lose money.

Equity securities generally have greater price volatility than fixed income securities, although under certain market conditions fixed income securities may have comparable or greater price volatility. During a general downturn in the securities markets, multiple asset classes may decline in value simultaneously. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. Different sectors of the market and different security types may react differently to such developments. Changes in value may be temporary or may last for extended periods. The Fund may experience a substantial or complete loss on any individual security. Even when securities markets perform well, there is no assurance that the investments held by the Fund will increase in value along with the broader market. Market factors, such as the demand for particular portfolio securities, may cause the price of certain portfolio securities to fall while the prices of other securities rise or remain unchanged.

Local, state, regional, national or global events such as war, acts of terrorism, the spread of infectious illness or other public health issues, recessions, or other events could have a significant impact on the Fund and its investments and could result in decreases to the Fund's net asset value. Political, geopolitical, natural and other events, including war, terrorism, trade disputes, government shutdowns, market closures, natural and environmental disasters, epidemics, pandemics and other public health crises and related events and governments' reactions to such events have led, and in the future may lead, to economic uncertainty, decreased economic activity, increased market volatility and other disruptive effects on U.S. and global economies and markets. Such events may have significant adverse direct or indirect effects on the Fund and its investments. For example, a widespread health crisis such as a global pandemic could cause substantial market volatility, exchange trading suspensions and closures, impact the ability to complete redemptions, and affect Fund performance. A health crisis may exacerbate other pre-existing political, social and economic risks. In addition, the increasing interconnectedness of markets around the world may result in many markets being affected by events or conditions in a single country or region or events affecting a single or small number of issuers.

Money Market Instrument Risk

The value of money market instruments may be affected by changing interest rates and by changes in the credit ratings of the investments. An investment in a money market fund is not insured or guaranteed by the FDIC or any other government agency. It is possible to lose money by investing in a money market fund. Recently, the SEC adopted money market fund reform intended to address potential systemic risks associated with money market funds and to improve transparency for money market fund investors. The money market fund reforms may impact the structure, operations and return potential of the money market funds in which the Fund invests.

New Fund Risk

Each Fund is recently formed. Investors bear the risk that the Fund may not grow to or maintain economically viable size, not be successful in implementing its investment strategy, and may not employ a successful investment strategy, any of which could result in the Fund being liquidated at any time without shareholder approval and/or at a time that may not be favorable for certain shareholders. Such a liquidation could have negative tax consequences for shareholders.

Passive Investment Risk

The US Core Equity ETF is not actively managed and its Adviser would not sell shares of an equity security due to current or projected underperformance of a security, industry, or sector, unless that security is removed from the Index or the selling of shares of that security is otherwise required upon a reconstitution of the Index as addressed in the Index methodology. The US Core Equity ETF invests in securities included in, or representative of securities included in, the Index, regardless of their investment merits. The US Core Equity ETF does not take defensive positions under any market conditions, including conditions that are adverse to the performance of the US Core Equity ETF.

Portfolio Turnover Risk

The Fund may experience high portfolio turnover, including investments made on a shorter-term basis, which may lead to increased Fund expenses that may result in lower investment returns. A higher portfolio turnover may result in higher transactional and brokerage costs. High portfolio turnover may also result in higher short-term capital gains taxable to shareholders.

Quantitative Investing Risk

The Adviser may use proprietary computer trading modeling systems to implement its investment strategies for the Fund. Investments selected using these models may perform differently than the market as a whole or from their expected performance as a result of the factors used in the models, the weight placed on each factor, changes from the factors' historical trends and technical issues in the construction and implementation of the models. There is no assurance that the models are complete or accurate, or representative of future market cycles, nor will they necessarily be beneficial to the Fund if they are accurate. These systems may negatively affect Fund performance for various reasons, including human judgment, inaccuracy of historical data and non-quantitative factors (such as market or trading system dysfunctions, investor fear or over-reaction).

Rules-Based Strategy Risk

A rules-based investment strategy may not be successful on an ongoing basis or could contain unknown errors. In addition, the data used may be inaccurate or the computer programming used to create a rules-based investment strategy might contain one or more errors. Moreover, during periods of increased volatility or changing market conditions the commonality of portfolio holdings and similarities between strategies of rules-based managers may amplify losses.

Sector Risk

The risk that if a Fund invests a significant portion of its total assets in certain issuers within the same economic sector, an economic, business or political development or natural or other event, including war, terrorism, natural and environmental disasters, epidemics, pandemics and other public health crisis adversely affecting that sector may affect the value of the Fund's investments more than if the Fund's investments were not so concentrated.

- *Consumer Discretionary Sector Risk.* The success of consumer product manufacturers and retailers is tied closely to the performance of domestic and international economies, interest rates, exchange rates, competition, consumer confidence, changes in demographics and consumer preferences. Companies in the consumer discretionary sector depend heavily on disposable household income and consumer spending, and may be strongly affected by social trends and marketing campaigns. These companies may be subject to severe competition, which may have an adverse impact on their profitability. In addition, the impact of any epidemic, pandemic or natural disaster, or widespread fear that such events may occur, could negatively affect the global economy and, in turn, negatively affect companies in the consumer discretionary sector. A recent example is the negative impact on the consumer discretionary sector of the aggressive measures taken worldwide by governments in response to COVID-19, including closing borders, restricting international and domestic travel, and the imposition of prolonged quarantines of large populations, and by businesses, including changes to operations and reducing staff.

- *Financials Sector Risk.* The financials sector includes companies in the banks, capital markets, diversified financials, and insurance industry groups. Performance of companies in the financials sector may be adversely impacted by many factors, including, among others, changes in government regulations, economic conditions, and interest rates, credit rating downgrades, and decreased liquidity in credit markets. The extent to which the Fund may invest in a company that engages in securities-related activities or banking is limited by applicable law. The impact of changes in capital requirements and recent or future regulation of any individual financial company, or of the financials sector as a whole, cannot be predicted. In recent years, cyber-attacks and technology malfunctions and failures have become increasingly frequent in this sector and have caused significant losses to companies in this sector, which may negatively impact the Fund.
- *Industrials Sector Risk.* The industrials sector includes companies in the commercial and professional services and transportation industry groups, including companies engaged in the business of human capital management, business research and consulting, air freight and logistics, airlines, maritime shipping and transportation, railroads and trucking, transportation infrastructure, and aerospace and defense. The value of securities issued by companies in the industrials sector may be adversely affected by supply and demand changes related to their specific products or services and industrials sector products in general. The products of manufacturing companies may face obsolescence due to rapid technological developments and frequent new product introduction. Global events and changes in government regulations, economic conditions and exchange rates may adversely affect the performance of companies in the industrials sector. Companies in the industrials sector may be adversely affected by liability for environmental damage and product liability claims. The industrials sector may also be adversely affected by changes or trends in commodity prices, which may be influenced by unpredictable factors. Companies in the industrials sector, particularly aerospace and defense companies, may also be adversely affected by government spending policies because companies in this sector tend to rely to a significant extent on government demand for their products and services.
- *Information Technology Sector Risk.* The information technology sector includes companies in the software and services, technology hardware and equipment and semiconductors and semiconductor equipment industry groups. Information technology companies face intense competition, both domestically and internationally, which may have an adverse effect on their profit margins. Like other technology companies, information technology companies may have limited product lines, markets, financial resources or personnel. The products of information technology companies may face obsolescence due to rapid technological developments, frequent new product introduction, unpredictable changes in growth rates and competition for the services of qualified personnel. Companies in the information technology sector are heavily dependent on patent and intellectual property rights. The loss or impairment of these rights may adversely affect the profitability of these companies.
- *Insurance Sector Risk.* The Fund may hold a significant investment in the insurance sector. Insurance companies' profits are affected by many factors, including interest rate movements, the imposition of premium rate caps, competition and pressure to compete globally. Certain types of insurance companies may also be affected by weather catastrophes and other disasters and mortality rates. In addition, although the industry is currently subject to extensive regulation, companies in this industry may be adversely affected by increased governmental regulation or tax law changes in the future.
- *Retail Sector Risk.* The Fund may hold a significant investment in the retail sector. Retail and related industries can be significantly affected by the performance of the domestic and international economy, consumer confidence and spending, intense competition, changes in demographics, and changing consumer tastes and preferences. In addition, the impact of any epidemic, pandemic or natural disaster, or widespread fear that such events may occur, could negatively affect the global economy and, in turn, negatively affect companies in the retail sector. A recent example is the negative impact on the retail sector of the aggressive measures taken worldwide by governments in response to COVID-19, including closing borders, restricting international and domestic travel, and the imposition of prolonged quarantines of large populations, and by businesses, including changes to operations and reducing staff.

Swap Risk

Swap agreements are subject to the risk that the counterparty to the swap will default on its obligation to pay the Fund and the risk that the Fund will not be able to meet its obligations to pay the counterparty to the swap. In addition, there is the risk that a swap may be terminated by the Fund or the counterparty in accordance with its terms. If a swap were to terminate, the Fund may be unable to implement its investment strategies and the Fund may not be able to seek to achieve its investment objective.

Tactical Overlay Strategy Risk

The Adviser employs a multi-factor tactical risk management overlay that seeks to identify periods of above average risk and exit positions in equity securities during such periods of above average risk. The failure of the overlay strategy to timely or properly identify periods of above average risk may prevent the Fund from avoiding losses in bad markets or may cause the Fund to miss gains in good markets.

U.S. Government Securities Risk

Treasury obligations may differ in their interest rates, maturities, times of issuance and other characteristics. Obligations of U.S. Government agencies and authorities are supported by varying degrees of credit but generally are not backed by the full faith and credit of the U.S. Government. No assurance can be given that the U.S. Government will provide financial support to its agencies and authorities if it is not obligated by law to do so. In addition, the value of U.S. Government securities may be affected by changes in the credit rating of the U.S. Government.

Volatility Risk

The Fund's investments may appreciate or decrease significantly in value over short periods of time. The value of an investment in the Fund's portfolio may fluctuate due to factors that affect markets generally or that affect a particular industry or sector. The value of an investment in the Fund's portfolio may also be more volatile than the market as a whole. This volatility may affect the Fund's net asset value per share, including by causing it to experience significant increases or declines in value over short periods of time. Events or financial circumstances affecting individual investments, industries or sectors may increase the volatility of the Fund.

Additional Information About Risks

The Funds' SAI, which is incorporated by reference into this Prospectus, includes more information about the Funds and their investments and risks. The risks described in this Prospectus (and in the SAI) are not intended to include every potential risk of investing in a Fund. The Funds could be subject to additional risks because the types of investments they make may change over time.

Portfolio Holdings Disclosure

A description of the Funds' policies regarding the release of portfolio holdings information is available in the Funds' SAI. Shareholders may request portfolio holdings schedules at no charge by calling 1-480-757-4277.

Cybersecurity

The computer systems, networks and devices used by a Fund and its service providers to carry out routine business operations employ a variety of protections designed to prevent damage or interruption from computer viruses, network failures, computer and telecommunication failures, infiltration by unauthorized persons and security breaches. Despite the various protections utilized by a Fund and its service providers, systems, networks, or devices potentially can be breached. Each Fund and its shareholders could be negatively impacted as a result of a cybersecurity breach. The Funds and the Adviser have limited ability to prevent or mitigate cybersecurity incidents affecting third-party Service Providers.

Cybersecurity breaches can include unauthorized access to systems, networks, or devices; infection from computer viruses or other malicious software code; and attacks that shut down, disable, slow, or otherwise disrupt operations, business processes, or website access or functionality. Cybersecurity breaches may cause disruptions and impact a Fund's business operations, potentially resulting in financial losses; interference with the Fund's ability to calculate its NAV; impediments to trading; the inability of the Funds, the Adviser, and other service providers to transact business; prevention of Fund investors from purchasing, redeeming or exchanging shares or receiving distributions; violations of applicable privacy and other laws; regulatory fines, penalties, reputational damage, reimbursement or other compensation costs, or additional compliance costs; as well as the inadvertent release of confidential information.

Similar adverse consequences could result from cybersecurity breaches affecting issuers of securities in which a Fund invests; counterparties with which a Fund engages in transactions; governmental and other regulatory authorities; exchange and other financial market operators, banks, brokers, dealers, insurance companies, and other financial institutions (including financial intermediaries and service providers for a Fund's shareholders); and other parties. In addition, substantial costs may be incurred by these entities in order to prevent any cybersecurity breaches in the future.

MANAGEMENT

Investment Adviser

Redwood Investment Management, LLC (“Redwood” or the “Adviser”), with principal offices at 4110 N. Scottsdale Rd., Suite 125, Scottsdale, AZ, 85251, serves as the investment adviser for the Funds. In addition to advising the Funds, Redwood provides discretionary investment advice to certain individuals, high net worth individuals, pension and profit sharing plans, trusts, estates, corporations, other investment advisory firms, affiliated registered investment companies and a pooled investment vehicle. Redwood also serves as a sub-advisor to other investment advisers. Subject to the supervision of the Funds’ Board of Trustees, the Adviser is responsible for managing the Funds’ investments, executing transactions and providing related administrative services and facilities under an Investment Advisory Agreement between the Funds and the Adviser. As of October 31, 2020, the Adviser had approximately \$1.4 billion in assets under management.

The Adviser has entered into an investment advisory agreement with the Funds. Under the agreement, the Adviser is entitled to receive an annual management fee set forth below of the Fund’s average daily net assets. Each Fund’s management fee is a “unitary” fee that includes all operating expenses payable by a Fund, except for brokerage fees and commissions, taxes, borrowing costs (such as dividend expenses on securities sold short and interest), fees and expenses of other investment companies in which a Fund may invest, and such extraordinary or non-recurring expenses as may arise, including litigation expenses.

Fund	Advisory Fee
LeaderShares [®] Activist Leaders [®] ETF	0.75%
LeaderShares [®] AlphaFactor [®] Tactical Focused ETF	0.99%
LeaderShares [®] AlphaFactor [®] US Core Equity ETF	0.75%
LeaderShares [®] Equity Skew ETF	0.75%

A discussion regarding the basis for the Board of Trustees’ approval of the investment advisory agreement with respect to the LeaderShares[®] AlphaFactor[®] US Core Equity ETF is available in the Funds’ semi-annual shareholder report dated April 30, 2020.

A discussion regarding the basis for the Board of Trustees’ approval of the investment advisory agreement with respect to the LeaderShares[®] Activist Leaders[®] ETF, LeaderShares[®] AlphaFactor[®] Tactical Focused ETF and LeaderShares[®] Equity Skew ETF is available in the Funds’ annual shareholder report dated October 31, 2020.

Portfolio Managers

Michael T. Messinger

Mr. Messinger is a Portfolio Manager and Principal at Redwood with eighteen years of experience in financial services. Mr. Messinger is responsible for overseeing the development, implementation, and live risk management of Redwood’s investment strategies. Prior to launching Redwood in 2010, he served as a Regional Vice President for RiverSource Investments (now known as Columbia Management) from 2007 to 2010. Mr. Messinger also worked as a marketer with ING’s investment management and insurance divisions from 2003 to 2007. Mr. Messinger began his career with UBS Wealth Management in 2000. Mr. Messinger holds a Bachelor’s degree in Finance from the University of Arizona.

Richard M. Duff

Mr. Duff is a Portfolio Manager and President of Redwood Investment Management, responsible for overseeing Redwood’s investment solutions from initial ideation to final implementation. Mr. Duff has been with Redwood since 2015. Mr. Duff began his career in 1994 as a member of the equity portfolio management committee at Pacific Income Advisers, that used a proprietary quantitative screening process combined with a team based qualitative overlay to manage U.S. core equity portfolios. Later he was a Managing Director at BlackRock, where he was Co-Head of the Private Client Group and a member of the Equity Operating Committee. Under his leadership, BlackRock launched its first quantitative factor-based suite of equity focused closed end funds. Immediately prior to joining Redwood, Mr. Duff was a partner and member of the investment committee at OMT Capital Management from 2010 to 2015, the general partner for Hawthorne Capital Partners, a long-short equity hedge fund focused on small cap U.S. equities. Mr. Duff received his Bachelor’s degree from the University of California, Berkeley, and received his Juris Doctorate from University of San Francisco, School of Law

Michael T. Cheung

Mr. Cheung is a Portfolio Manager and Senior Quantitative Analyst at Redwood. He has been with Redwood since 2013, and conducts research and macro analysis on current and prospective investments. His primary focus is on research, development, and testing of systematic investment strategies. He is also responsible for proprietary research software design and development, having experience working with a variety of programming languages and database structures. Mr. Cheung brings several years of quantitative investing experience, previously positioned as a head trader at a proprietary equities trading desk, responsible for overseeing both automated and discretionary trading systems. Prior to joining Redwood, Mr. Cheung was a quantitative trader at Coastal Trade Securities, LLC from 2010 to 2012 and at Agoge Capital, LLC from 2012 to 2013. Mr. Cheung studied quantitative economics and mathematics at the University of California, Irvine.

The Funds’ SAI provides additional information about each Portfolio Manager’s compensation, other accounts managed by each Portfolio Manager, and each Portfolio Manager’s ownership of Fund shares.

DETERMINATION OF NET ASSET VALUE

The net asset value (“NAV”) of a Fund’s shares is determined at the close of regular trading on the New York Stock Exchange (normally 4:00 p.m. Eastern Time) on each day the New York Stock Exchange (“NYSE”) is open. NAV is computed by determining the aggregate market value of all assets of the applicable Fund, less its liabilities, divided by the total number of shares outstanding ((assets-liabilities)/number of shares = NAV). The NYSE is closed on weekends and New Year’s Day, Martin Luther King, Jr. Day, Presidents’ Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day. The NAV takes into account the expenses and fees of a Fund, including management, administration, and distribution fees, which are accrued daily.

Generally, each Fund’s securities are valued each day at the last quoted sales price on each security’s primary exchange. Securities traded or dealt in upon one or more securities exchanges (whether domestic or foreign) for which market quotations are readily available and not subject to restrictions against resale shall be valued at the last quoted sales price on the primary exchange or, in the absence of a sale on the primary exchange, at the mean between the current bid and ask prices on such exchange. Securities primarily traded in the National Association of Securities Dealers’ Automated Quotation System (“NASDAQ”) National Market System for which market quotations are readily available shall be valued using the NASDAQ Official Closing Price. Securities that are not traded or dealt in any securities exchange (whether domestic or foreign) and for which over-the-counter market quotations are readily available generally shall be valued at the last sale price or, in the absence of a sale, at the mean between the current bid and ask price on such over-the-counter market. Debt securities not traded on an exchange may be valued at prices supplied by a pricing agent(s) based on broker or dealer supplied valuations or matrix pricing, a method of valuing securities by reference to the value of other securities with similar characteristics, such as rating, interest rate and maturity.

If market quotations are not readily available, securities will be valued at their fair market value as determined using the “fair value” procedures approved by the Board. Fair value pricing involves subjective judgments and it is possible that the fair value determined for a security may be materially different than the value that could be realized upon the sale of that security. The fair value prices can differ from market prices when they become available or when a price becomes available. The Board has delegated execution of these procedures to a fair value team composed of one or more representatives from each of the (i) Trust, (ii) administrator, and (iii) adviser. The team may also enlist third party consultants such as an audit firm or financial officer of a security issuer on an as-needed basis to assist in determining a security-specific fair value. The Board reviews and considers the determinations reached by the fair value committee in ratifying the fair value committee’s application of the fair valuation methodologies employed.

A Fund may use independent pricing services to assist in calculating the value of the Fund’s securities. In addition, market prices for foreign securities are not determined at the same time of day as the NAV for a Fund. Because a Fund may invest in securities primarily listed on foreign exchanges, and these exchanges may trade on weekends or other days when the Fund does not price its shares, the value of some of the Fund’s portfolio securities may change on days when Authorized Participants will not be able to purchase or redeem Fund shares.

In computing the NAV, a Fund values foreign securities held by the Fund at the latest closing price on the exchange in which they are traded immediately prior to closing of the NYSE. Prices of foreign securities quoted in foreign currencies are translated into U.S. dollars at current rates. If events materially affecting the value of a security in a Fund’s portfolio, particularly foreign securities, occur after the close of trading on a foreign market but before the Fund prices its shares, the security will be valued at fair value. For example, if trading in a portfolio security is halted and does not resume before a Fund calculates its NAV, the Adviser may need to price the security using the Fund’s fair value pricing guidelines. The determination of fair value involves subjective judgments. As a result, using fair value to price a security may result in a price materially different from the prices used by other funds to determine net asset value, or from the price that may be realized upon the actual sale of the security.

With respect to any portion of a Fund’s assets that are invested in one or more open-end management investment companies registered under the 1940 Act, such Fund’s net asset value is calculated based upon the net asset values of those open-end management investment companies, and the prospectuses for these companies explain the circumstances under which those companies will use fair value pricing and the effects of using fair value pricing.

Premium/Discount Information

Most investors will buy and sell shares of each Fund in secondary market transactions through brokers at market prices and each Fund’s shares will trade at market prices. The market price of shares of a Fund may be greater than, equal to, or less than NAV. Market forces of supply and demand, economic conditions and other factors may affect the trading prices of shares of a Fund.

Information regarding the intraday value of shares of each Fund, also known as the “indicative optimized portfolio value” (“IOPV”), may be disseminated every 15 seconds throughout each trading day by the securities exchange on which a Fund’s shares are listed or by market data vendors or other information providers. The IOPV is based on the current market value of each Fund’s securities, including cash required to be deposited in exchange for a Creation Unit. The IOPV is generally determined by using both current market quotations and price quotations obtained from broker-dealers and other market intermediaries that may trade in a Fund’s portfolio securities. The IOPV may not reflect the exact composition of a Fund’s current portfolio of securities at a particular point in time or the best possible valuation of a Fund’s current portfolio. As a result, the IOPV should not be confused with the NAV, which is computed only once a day. Information regarding how often the shares of a Fund traded at a price above (at a premium to) or below (at a discount to) the NAV of the Fund during the past four calendar quarters, when available, can be found at www.leadersharetfs.com.

HOW TO BUY AND SELL SHARES

Shares of each Fund are listed for trading on NYSE. Shares of the LeaderShares[®] Activist Leaders[®] ETF, LeaderShares[®] AlphaFactor[®] Tactical Focused ETF, LeaderShares[®] AlphaFactor[®] US Core Equity ETF, and LeaderShares[®] Equity Skew ETF are listed under the symbols ACTV, LSAT, LSAF, and SQEW, respectively. Share prices are reported in dollars and cents per Share. Shares can be bought and sold on the secondary market throughout the trading day like other publicly traded shares, and shares typically trade in blocks of less than a Creation Unit. There is no minimum investment required. Shares may only be purchased and sold on the secondary market when the Exchange is open for trading. The Exchange is open for trading Monday through Friday and is closed on weekends and the following holidays, as observed: New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day.

When buying or selling shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offered price in the secondary market on each leg of a round trip (purchase and sale) transaction.

Authorized participants ("APs") may acquire shares directly from a Fund, and APs may tender their shares for redemption directly to a Fund, at NAV per Share only in large blocks, or Creation Units, of 25,000 shares. Purchases and redemptions directly with a Fund must follow such Fund's procedures, which are described in the SAI.

Each Fund may liquidate and terminate at any time without shareholder approval.

Share Trading Prices

The approximate value of shares of a Fund, an amount representing on a per share basis the sum of the current market price of the securities accepted by a Fund in exchange for shares of the Fund and an estimated cash component will be disseminated every 15 seconds throughout the trading day through the facilities of the Consolidated Tape Association. This approximate value should not be viewed as a "real-time" update of the NAV per share of a Fund because the approximate value may not be calculated in the same manner as the NAV, which is computed once a day, generally at the end of the business day. A Fund is not involved in, or responsible for, the calculation or dissemination of the approximate value of the shares, and the Funds do not make any warranty as to the accuracy of these values.

Book Entry

Shares are held in book entry form, which means that no stock certificates are issued. The Depository Trust Company ("DTC") or its nominee is the record owner of all outstanding shares of a Fund and is recognized as the owner of all shares for all purposes.

Investors owning shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all shares. Participants in DTC include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of shares, you are not entitled to receive physical delivery of stock certificates or to have shares registered in your name, and you are not considered a registered owner of shares. Therefore, to exercise any right as an owner of shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book entry or "street name" form.

FREQUENT PURCHASES AND REDEMPTIONS OF FUND SHARES

Each Fund's shares can only be purchased and redeemed directly from such Fund in Creation Units by APs, and the vast majority of trading in a Fund's shares occurs on the secondary market. Because the secondary market trades do not directly involve a Fund, it is unlikely those trades would cause the harmful effects of market timing, including dilution, disruption of portfolio management, increases in the Fund's trading costs and the realization of capital gains. With regard to the purchase or redemption of Creation Units directly with a Fund, to the extent effected in-kind (*i.e.*, for securities), those trades do not cause the harmful effects that may result from frequent cash trades. To the extent trades are effected in whole or in part in cash, those trades could result in dilution to a Fund and increased transaction costs, which could negatively impact a Fund's ability to achieve its investment objective. However, direct trading by APs is critical to ensuring that a Fund's shares trade at or close to NAV. Each Fund also employs fair valuation pricing to minimize potential dilution from market timing. In addition, each Fund imposes transaction fees on purchases and redemptions of Fund shares to cover the custodial and other costs incurred by a Fund in effecting trades. These fees increase if an investor substitutes cash in part or in whole for securities, reflecting the fact that a Fund's trading costs increase in those circumstances. Given this structure, the Trust has determined that it is not necessary to adopt policies and procedures to detect and deter market timing of each Fund's shares.

DISTRIBUTION AND SERVICE PLAN

The Funds have adopted a distribution and service plan (“Plan”) pursuant to Rule 12b-1 under the 1940 Act. Under the Plan, each Fund is authorized to pay distribution fees to the distributor and other firms that provide distribution and shareholder services (“Service Providers”). If a Service Provider provides these services, the Funds may pay fees at an annual rate not to exceed 0.25% of average daily net assets, pursuant to Rule 12b-1 under the 1940 Act.

No distribution or service fees are currently paid by the Funds, and there are no current plans to impose these fees. In the event Rule 12b-1 fees were charged, over time they would increase the cost of an investment in the Funds.

Additional Compensation to Financial Intermediaries: Northern Lights Distributors, LLC, the Funds’ distributor, its affiliates, and the Funds’ Adviser or its affiliates may, at their own expense and out of their own legitimate profits, provide additional cash payments to financial intermediaries who sell shares of the Funds, including affiliates of the Adviser. Financial intermediaries include brokers, financial planners, banks, insurance companies, retirement or 401(k) plan administrators and others. These payments are generally made to financial intermediaries that provide shareholder or administrative services, or marketing support. Marketing support may include access to sales meetings, sales representatives and financial intermediary management representatives, inclusion of the Funds on a sales list, including a preferred or select sales list, or other sales programs. These payments also may be made as an expense reimbursement in cases where the financial intermediary provides shareholder services to Fund shareholders.

DIVIDENDS, OTHER DISTRIBUTIONS AND TAXES

Unlike interests in conventional mutual funds, which typically are bought and sold from and to the fund only at closing NAVs, the Funds’ shares are traded throughout the day in the secondary market on a national securities exchange on an intra-day basis and are created and redeemed in-kind and/or for cash in Creation Units at each day’s next calculated NAV. In-kind arrangements are designed to protect ongoing shareholders from the adverse effects on a Fund’s portfolio that could arise from frequent cash redemption transactions. In a conventional mutual fund, redemptions can have an adverse tax impact on taxable shareholders if the mutual fund needs to sell portfolio securities to obtain cash to meet net fund redemptions. These sales may generate taxable gains for the ongoing shareholders of the mutual fund, whereas the shares’ in-kind redemption mechanism generally will not lead to a tax event for a Fund or its ongoing shareholders.

Ordinarily, dividends from net investment income, if any, are declared and paid annually by LeaderShares[®] Activist Leaders[®] ETF, LeaderShares[®] AlphaFactor[®] Tactical Focused ETF and LeaderShares[®] Equity Skew ETF and the LeaderShares[®] AlphaFactor[®] US Core Equity ETF declares and pays dividends from net investment income, if any, quarterly.

Each Fund distributes its net realized capital gains, if any, to shareholders annually.

Distributions in cash may be reinvested automatically in additional whole shares only if the broker through whom you purchased shares makes such option available.

Taxes

As with any investment, you should consider how your investment in shares will be taxed. The tax information in this Prospectus is provided as general information. You should consult your own tax professional about the tax consequences of an investment in shares.

Unless your investment in shares is made through a tax-exempt entity or tax-deferred retirement account, such as an individual retirement account, you need to be aware of the possible tax consequences when:

- A Fund makes distributions,
- You sell your shares listed on the Exchange, and
- You purchase or redeem Creation Units.

Taxes on Distributions

As stated above, dividends from net investment income, if any, ordinarily are declared and paid annually by the Funds. A Fund may also pay a special distribution at the end of a calendar year to comply with federal tax requirements. Distributions from a Fund’s net investment income, including net short-term capital gains, if any, are taxable to you as ordinary income, except that a Fund’s dividends attributable to its “qualified dividend income” (*i.e.*, dividends received on stock of most domestic and certain foreign corporations with respect to which a Fund satisfies certain holding period and other restrictions), if any, generally are subject to federal income tax for non-corporate shareholders who satisfy those restrictions with respect to their Fund shares at the rate for net capital gain -- a maximum of 20%. In addition, a 3.8% Medicare tax may also apply. A part of a Fund’s dividends also may be eligible for the dividends-received deduction allowed to corporations -- the eligible portion may not exceed the aggregate dividends the Fund receives from domestic corporations subject to federal income tax (excluding REITs) and excludes dividends from foreign corporations -- subject to similar restrictions.

In general, your distributions are subject to federal income tax when they are paid, whether you take them in cash or reinvest them in a Fund (if that option is available). Distributions reinvested in additional shares of a Fund through the means of a dividend reinvestment service, if available, will be taxable to shareholders acquiring the additional shares to the same extent as if such distributions had been received in cash. Distributions of net long-term capital gains, if any, in excess of net short-term capital losses are taxable as long-term capital gains, regardless of how long you have held the shares.

Distributions in excess of a Fund's current and accumulated earnings and profits are treated as a tax-free return of capital to the extent of (and in reduction of) your basis in the shares and as capital gain thereafter. A distribution will reduce a Fund's NAV per Share and may be taxable to you at ordinary income or capital gain rates (as described above) even though, from an investment standpoint, the distribution may constitute a return of capital.

By law, each Fund is required to withhold 24% of your distributions and redemption proceeds if you have not provided such Fund with a correct Social Security number or other taxpayer identification number and in certain other situations.

Taxes on Exchange-Listed Share Sales

Any capital gain or loss realized upon a sale of shares is generally treated as long-term capital gain or loss if the shares have been held for more than one year and as short-term capital gain or loss if the shares have been held for one year or less. The ability to deduct capital losses from sales of shares may be limited.

Taxes on Purchase and Redemption of Creation Units

An AP who exchanges securities for Creation Units generally will recognize a gain or a loss equal to the difference between the market value of the Creation Units at the time of the exchange and the sum of the exchanger's aggregate basis in the securities surrendered plus any Cash Component (as defined in the SAI) it pays. An AP who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanger's basis in the Creation Units and the sum of the aggregate market value of the securities received plus any cash equal to the difference between the NAV of the shares being redeemed and the value of the securities. The Internal Revenue Service ("Service"), however, may assert that a loss realized upon an exchange of securities for Creation Units cannot be deducted currently under the rules governing "wash sales" or for other reasons. Persons exchanging securities should consult their own tax advisors with respect to whether wash sale rules apply and when a loss might be deductible.

Any capital gain or loss realized upon redemption of Creation Units is generally treated as long-term capital gain or loss if the shares have been held for more than one year and as short-term capital gain or loss if the shares have been held for one year or less.

If you purchase or redeem Creation Units, you will be sent a confirmation statement showing how many shares you purchased or sold and at what price. See "Tax Status" in the SAI for a description of the requirement regarding basis determination methods applicable to Share redemptions and a Fund's obligation to report basis information to the Service.

The foregoing discussion summarizes some of the possible consequences under current federal tax law of an investment in the Funds. It is not a substitute for personal tax advice. Consult your personal tax advisor about the potential tax consequences of an investment in the shares under all applicable tax laws. See "TAX STATUS" in the SAI for more information.

FUND SERVICE PROVIDERS

Gemini Fund Services, LLC is the Funds' administrator and fund accountant. It has its principal office at 4221 North 203rd Street, Suite 100, Elkhorn, Nebraska 68022, and is primarily in the business of providing administrative, fund accounting and transfer agent services to retail and institutional mutual funds. It is an affiliate of the Distributor.

Brown Brothers Harriman & Co. ("BBH"), 50 Post Office Square, Boston, MA 02110, is the Funds' custodian and transfer agent.

Northern Lights Distributors, LLC (the "Distributor"), 4221 North 203rd Street, Suite 100, Elkhorn, Nebraska 68022, is the distributor for the shares of the Funds. The Distributor is a registered broker-dealer and member of the Financial Industry Regulatory Authority, Inc. ("FINRA").

Blank Rome LLP, 1271 Avenue of the Americas, New York, NY 10020, serves as legal counsel to the Trust.

Grant Thornton LLP, Two Commerce Square, 2001 Market Street, Suite 700, Philadelphia, PA 19103, serves as the Funds' independent registered public accounting firm, providing services including (i) audit of annual financial statements, (ii) review of certain documents to be filed with the U.S. Securities and Exchange Commission and (iii) other audit related and tax services including preparation of the Funds' tax returns.

OTHER INFORMATION

Investment by Other Investment Companies

The SEC has granted an exemptive order to the Adviser and the Trust permitting, among other relief, registered investment companies and unit investment trusts that enter into an agreement with the Trust (“Investing Funds”) to invest in the Funds beyond the limits set forth in Section 12(d)(1) of the 1940 Act, subject to certain terms and conditions. Pursuant to recently enacted SEC rules, the Investing Funds may rely on the exemptive order to make such investments until January 19, 2022. Section 12(d)(1) of the Investment Company Act restricts investments by registered investment companies and companies relying on Section 3(c)(1) or Section 3(c)(7) of the Investment Company Act in the securities of other investment companies.

Continuous Offering

The method by which Creation Units of shares are created and traded may raise certain issues under applicable securities laws. Because new Creation Units of shares are issued and sold by the Funds on an ongoing basis, a “distribution,” as such term is used in the Securities Act of 1933, as amended (the “Securities Act”), may occur at any point. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the prospectus delivery requirement and liability provisions of the Securities Act.

For example, a broker-dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the Distributor, breaks them down into constituent shares and sells the shares directly to customers or if it chooses to couple the creation of a supply of new shares with an active selling effort involving solicitation of secondary market demand for shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker-dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to a characterization as an underwriter.

Broker-dealer firms should also note that dealers who are not “underwriters” but are effecting transactions in shares, whether or not participating in the distribution of shares, are generally required to deliver a prospectus. This is because the prospectus delivery exemption in Section 4(3) of the Securities Act is not available in respect of such transactions as a result of Section 24(d) of the 1940 Act. As a result, broker-dealer firms should note that dealers who are not “underwriters” but are participating in a distribution (as contrasted with engaging in ordinary secondary market transactions) and thus dealing with the shares that are part of an overallotment within the meaning of Section 4(3)(C) of the Securities Act, will be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. For delivery of prospectuses to exchange members, the prospectus delivery mechanism of Rule 153 under the Securities Act is only available with respect to transactions on a national exchange.

Dealers effecting transactions in the shares, whether or not participating in this distribution, are generally required to deliver a Prospectus. This is in addition to any obligation of dealers to deliver a Prospectus when acting as underwriters.

Householding: To reduce expenses, the Funds mail only one copy of the prospectus and each annual and semi-annual report (or, if applicable, each notice of electronic accessibility thereof) to those addresses shared by two or more accounts. If you wish to receive individual copies of these documents, please call the Funds at 1-480-757-4277 on days the Funds are open for business or contact your financial institution. Each Fund will begin sending you individual copies thirty days after receiving your request.

Index and Calculation Agent

The AlphaFactor[®] US Core Equity Index (the “Index”) was developed by the Adviser to the LeaderShares[®] AlphaFactor[®] US Core Equity ETF (the “Fund”). The Adviser has entered into an agreement with Solactive, AG to maintain, calculate and distribute information about the market value of the Index. Solactive, AG serves as the Index administrator and is responsible for Index governance.

Index Disclaimers

Neither Redwood Investment Management, LLC nor Solactive, AG guarantees the accuracy and/or the completeness of the Index or any data included therein, and neither Redwood Investment Management, LLC nor Solactive, AG shall have any liability for any errors, omissions or interruptions therein. Neither Redwood Investment Management, LLC nor Solactive, AG make any warranty, express or implied, as to results to be obtained by the Fund, owners of the shares of the Fund or any other person or entity from the use of the Index, trading based on the Index, or any data included therein, either in connection with the Fund or for any other use. Neither Redwood Investment Management, LLC nor Solactive, AG makes any express or implied warranties, and expressly disclaim all warranties of merchantability or fitness for a particular purpose or use with respect to the Index or any data included therein. Without limiting any of the foregoing, in no event shall either Redwood Investment Management, LLC or Solactive, AG have any liability for any special, punitive, direct, indirect or consequential damages (including lost profits) arising out of matters relating to the use of the Index, even if notified of the possibility of such damages.

The Fund and the Adviser make no representation or warranty, express or implied, to the owners of the Fund or any member of the public regarding the advisability of investing in securities generally or in the Fund in particular or the ability of the Index to track general stock market performance. Redwood Investment Management, LLC has no obligation to take the needs of the Trust, the Fund or the owners of the Fund into consideration in determining, composing or calculating the Index.

The Index is the property of Redwood Investment Management, LLC, which has contracted with the Calculation Agent to calculate and maintain the Index. Solactive, AG will not be liable for any errors or omissions in calculating the Index. The Fund is not sponsored, endorsed, sold or promoted by Solactive, AG. Solactive, AG does not make any representation or warranty, express or implied, to the owners of the Fund or any member of the public regarding the advisability of investing in securities generally or in the Fund particularly or the ability of the Index to track general market performance. Solactive, AG’s only relationship to Redwood Investment Management, LLC with respect to the Index is the licensing of certain trademarks, service marks and trade names of Solactive, AG, and the provision of the calculation services related to the Index. Solactive, AG is not responsible for and has not participated in the determination of the prices and amount of the Fund or the timing of the issuance or sale of the Fund or in the determination or calculation of the equation by which the Fund may be converted into cash or other redemption mechanics. Solactive, AG has no obligation or liability in connection with the administration, marketing or trading of the Fund. Solactive, AG is not an investment adviser. Inclusion of a security within the Index is not a recommendation by Solactive, AG to buy, sell, or hold such security, nor is it investment advice.

SOLACTIVE, AG DOES NOT GUARANTEE THE ADEQUACY, ACCURACY, TIMELINESS AND/OR THE COMPLETENESS OF THE INDEX OR ANY DATA RELATED THERETO OR ANY COMMUNICATION WITH RESPECT THERETO, INCLUDING, ORAL, WRITTEN, OR ELECTRONIC COMMUNICATIONS. SOLACTIVE, AG SHALL NOT BE SUBJECT TO ANY DAMAGES OR LIABILITY FOR ANY ERRORS, OMISSIONS, OR DELAYS THEREIN. SOLACTIVE, AG MAKES NO EXPRESS OR IMPLIED WARRANTIES, AND EXPRESSLY DISCLAIMS ALL WARRANTIES, OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE OR AS TO RESULTS TO BE OBTAINED BY REDWOOD INVESTMENT MANAGEMENT, LLC, OWNERS OF THE FUND, OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE INDEX OR WITH RESPECT TO ANY DATA RELATED THERETO. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT WHATSOEVER SHALL SOLACTIVE, AG BE LIABLE FOR ANY INDIRECT, SPECIAL, INCIDENTAL, PUNITIVE, OR CONSEQUENTIAL DAMAGES, INCLUDING BUT NOT LIMITED TO, LOSS OF PROFITS, TRADING LOSSES, LOST TIME, OR GOODWILL, EVEN IF THEY HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES, WHETHER IN CONTRACT, TORT, STRICT LIABILITY, OR OTHERWISE.

FINANCIAL HIGHLIGHTS

The financial highlights tables are intended to help you understand the Funds' financial performance for the period of the Funds or share class's operations. Certain information reflects financial results for a single Fund share. The total returns in the tables represent the rate that an investor would have earned (or lost) on an investment in the Funds (assuming reinvestment if all dividends and distributions). This information has been derived from the financial statements audited by Grant Thornton, LLP, whose report, along with the Funds' financial statements and related notes, are included in the Funds' October 31, 2020 annual report, which is available upon request and incorporated by reference in the SAI.

LeaderShares® Activist Leaders® ETF

Per Share Data and Ratios for a Share of Beneficial Interest Outstanding Throughout The Period Presented

	For the Period Ended October 31, 2020*
Net asset value, beginning of period	\$ 25.00
Activity from investment operations:	
Net investment loss ⁽¹⁾	(0.00)**
Net realized and unrealized loss on investments	(0.71)
Total from investment operations	(0.71)
Net asset value, end of period	\$ 24.29
Market price, end of period	\$ 24.30
Total return ⁽²⁾	(2.84)% ⁽⁴⁾
Net assets, at end of period (000s)	\$ 42,513
Ratio of expenses to average net assets	0.75% ⁽³⁾
Ratio of net investment income/(loss) to average net assets	(0.75)% ⁽³⁾
Portfolio Turnover Rate ⁽⁵⁾	3% ⁽⁴⁾

* Fund commenced operation on October 26, 2020.

** Represents less than \$0.01 per share.

(1) Per share amounts calculated using the average shares method, which more appropriately presents the per share data for each period.

(2) Total return is calculated assuming a purchase of shares at net asset value on the first day and a sale at net asset value on the last day of the period. Distributions are assumed, for the purpose of this calculation, to be reinvested at the ex-dividend date net asset value per share on their respective payment dates.

(3) Annualized

(4) Not annualized

(5) Portfolio turnover rate excludes portfolio securities received or delivered as a result of processing capital share transactions in Creation Units.
